Cheng, Kevin Z. Truman, 2017-12-21 Today s biggest structural engineering challenge is to design better structures and a key issue is the need to take an integrated approach which balances control of costs with the requirement for handling earthquakes and other dynamic forces Structural optimization is based on rigorous mathematical formulation and requires computation algorithms for sizing structural elements and synthesizing systems Now that the right software and enough computing power are readily available professionals can now develop a suite of alternative designs and a select suitable one A thoroughly written and practical book on structural optimization is long overdue This solid book comprehensively presents current optimization strategies illustrated with sufficient examples of the design of elements and systems and presenting descriptions of the process and results Emphasis is given to dynamic loading in particular to seismic forces Researchers and practising engineers will find this book an excellent reference and advanced undergraduates or graduate students can use it as a resource for structural optimization design *Handbook for Blast Resistant Design of Buildings* Donald O.

Dusenberry,2010-01-26 Unique single reference supports functional and cost efficient designs of blast resistant buildings Now there s a single reference to which architects designers and engineers can turn for guidance on all the key elements of the design of blast resistant buildings that satisfy the new ASCE Standard for Blast Protection of Buildings as well as other ASCE ACI and AISC codes The Handbook for Blast Resistant Design of Buildings features contributions from some of the most knowledgeable and experienced consultants and researchers in blast resistant design This handbook is organized into four parts Part 1 Design Considerations sets forth basic principles examining general considerations in the design process risk analysis and reduction criteria for acceptable performance materials performance under the extraordinary blast environment and performance verification for technologies and solution methodologies Part 2 Blast Phenomena and Loading describes the explosion environment loading functions needed for blast response analysis and fragmentation and associated methods for effects analysis Part 3 System Analysis and Design explains the analysis and design considerations for structural building envelope component space site perimeter and building system designs Part 4 Blast Resistant Detailing addresses the use of concrete steel and masonry in new designs as well as retrofitting existing structures As the demand for blast resistant buildings continues to grow readers can turn to the Handbook for Blast Resistant Design of Buildings a unique single source of information to support competent functional and cost efficient designs **Applied Strength of Materials, Fifth Edition**

Use of Timber in Tall Multi-Storey Buildings Ian Smith,Andrea Frangi,2014-01-01 Since the dawn of civilization timber has been a primary material for achieving great structural engineering feats Yet during the late 19th century and most of the 20th century it lost currency as a preferred material for construction of large and tall multi storey building superstructures This Structural Engineering Document SED addresses a reawakening of interest in timber and timber based products as primary construction materials for relatively tall multi storey buildings Emphasis throughout is on holistically addressing various aspects of performance of complete systems reflecting that major gaps in knowhow relate to design concepts rather than technical information about timber as a material Special consideration is given to structural form fire vulnerability and durability aspects for attaining desired building performance over lifespans that can be centuries long
