Integrating Green Chemistry and Sustainable Engineering Shahid Ul Islam, 2019-03-26 This

groundbreaking book covers the recent advances in sustainable technologies and developments and describes how green chemistry and engineering practices are being applied and integrated in various industrial sectors. Over the past decade, the population explosion, rise in global warming, depletion of fossil fuel resources and environmental pollution have been the major driving force for promoting and implementing the principles of green chemistry and sustainable engineering in all sectors ranging from chemical to environmental sciences. It plays a growing role in the chemical processing industries. Green chemistry and engineering are relatively new areas focused on minimizing generations of pollution by utilizing alternative feedstocks, developing, selecting and using less environmentally harmful solvents, finding new synthesis pathways, improving selectivity in reactions, generating less waste, avoiding the use of highly toxic compounds and much more. In an effort to advance the discussion of green chemistry and engineering, this book contains 19 chapters describing greener approaches to the design and development of processes and products. The contributors describe the production of third generation biofuels, sustainable and economic production of hydrogen by water splitting using solar energy, efficient energy harvesting mechanisms involved in the conversion of biomass, green nanocomposites, bio-based polymers, ionic liquids as green solvents, sustainable nitrogen fixation, bioremediation and much more. The book aims at motivating chemists and engineers as well as postgraduate and PhD students and postdocs to pay attention to an acute need for the implementation of green chemistry principles in the field of chemical engineering, biomedical engineering, agriculture, environmental engineering, chemical processing and material sciences.

Green Chemistry Mark Anthony Benvenuto, Heinz Plaumann, 2022-06-21. The continued greening of the energy sector with inroads being made through numerous sources of materials that can produce energy is the main focus of this Green Chemical Processing Volume 8. It includes contributions from area experts in widely different fields all involved in energy production and makes connections to the 12 Principles of Green Chemistry.

Green Chemistry in Environmental Sustainability and Chemical Education Virinder S. Parmar, Priti Malhotra, Divya Mathur, 2018-08-13. Chemistry is considered to be one of the prime causes of environmental pollution and degradation. The United Nations General Assembly also addressed the environmental challenges in its Sustainable Development Goals (SDGs) which have been adopted in 2015. A closer look shows that to meet these goals, chemistry will play an important role. Green chemistry encompasses design and synthesis of environmentally benign chemical processes, green approaches to minimize and/or remediate environmental pollution, the development of biomaterials, biofuel and bioenergy production, biocatalysis and policies and ethics in green chemistry. When products in use today become waste, we need to treat that waste so that hazardous substances are not re-circulated into new products. In this context, circular economy is also an important point of discussion which focuses on recycling, reuse and use of renewable sources. The theme of the International Conference on Green Chemistry in Environmental Sustainability Chemical Education ICGC 2016 held in Delhi from 17-18 November 2016 was to discuss the emerging green trends in the direction of sustainability and environmental safety.
