Cocks, 2012-12-06 This volume constitutes the Proceedings of the IUT AM Symposium on Mechanics of Granular and Porous Materials held in Cambridge from 15th to 17th July 1996 The objectives were 1 To review existing experimental results and practical phenomena on the flow and compaction of particulate media 2 To review the current state of constitutive models and their implementation for predicting the macroscopic response 3 Identification of the shortcomings of existing models and procedures in understanding practical phenomena The Symposium brought together the research communities of solid mechanics materials science geomechanics chemical engineering and mathematics to review current knowledge of the flow and compaction of granular and porous media The meeting emphasised the development and use of constitutive laws to model practical processes such as mixing drainage and drying compaction of metal and ceramic powders and soils and instabilities associated with these processes A common theme was to develop constitutive models from an understanding of the underlying physical mechanisms of deformation and fracture It was particularly rewarding to find that the separate research communities came together during the meeting and came to a consensus as to the main mechanisms of deformation and failure of particulate and porous solids

Electronic Structure of Alloys, Surfaces and Clusters Abhijit Mookerjee,D.D. Sarma,2002-11-28 Understanding the electronic structure of solids is a basic part of theoretical investigation in physics Application of investigative techniques requires the solid under investigation to be periodic However this is not always the case This volume addresses three classes of non periodic solids currently undergoing the most study alloys surfaces and clusters Understanding the electronic structure of these systems is fundamental not only for the basic science but also constitutes a very important step in various technological aspects such as tuning their stabilities chemical and catalytic reactivities and magnetism Expert practitioners give an up to date account of the field with enough detailed background so that even a newcomer can follow the development The theoretical framework is discussed in addition to the present status of knowledge in the field Electronic Structure of Alloys Surfaces and Clusters also includes an extensive bibliography which provides a comprehensive reading list of work on the topic

Dynamics of Heterogeneous Materials Vitali Nesterenko,2013-03-09 This monograph deals with the behavior of essentially nonlinear heterogeneous materials in processes occurring under intense dynamic loading where microstructural effects play the main role This book is not an introduction to the dynamic behavior of materials and general information available in other books is not included The material herein is presented in a form I hope

will make it useful not only for researchers working in related areas but also for graduate students I used it successfully to teach a course on the dynamic behavior of materials at the University of California San Diego Another course well suited to the topic may be nonlinear wave dynamics in solids especially the part on strongly nonlinear waves About 100 problems presented in the book at the end of each chapter will help the reader to develop a deeper understanding of the subject I tried to follow a few rules in writing this book 1 To focus on strongly nonlinear phenomena where there is no small parameter with respect to the amplitude of disturbance including solitons shock waves and localized shear 2 To take into account phenomena sensitive to materials structure where typical space scale of material parameters particle size cell size are presented in the models or are variable in experimental research
