Green Planet Stanley A Rice, 2009-01-28 Plants are not just a pretty part of the landscape they keep the entire planet with all of its human and nonhuman inhabitants alive Stanley Rice documents the many ways in which plants do this by making oxygen regulating the greenhouse effect controlling floods and producing all the food in the world Plants also create natural habitats for all organisms in the world With illustrations and clear writing for non specialists Green Planet helps general readers realize that if we are to rescue the Earth from environmental disaster we must protect wild plants Beginning with an overview of how human civilization has altered the face of the Earth particularly by the destruction of forests the book details the startling consequences of these actions Rice provides compelling reasons for government officials economic leaders and the public to support efforts to save threatened and endangered plants Global campaigns to solve environmental problems with plants such as the development of green roofs and the Green Belt Movement a women s organization in Kenya that empowers communities worldwide to protect the environment show readers that efforts to save wild plants can be successful and beneficial to the economic well being of nations Through current scientific evidence readers see that plants are vital to the ecological health of our planet and understand what can be done to lead to a better and greener future Benefits of plants Help modulate greenhouse gases Produce almost all oxygen in the air Create cool shade that reduces energy costs Prevent floods droughts and soil erosion Produce all of the food in the world Create and preserve soil Create natural habitats Heal the landscape after natural and human disasters

Life of Earth Stanley A. Rice, Ph.D, 2012-10-31 In this portrait of Planet Earth at just about the mid point of its probable lifespan a biologist discusses the evolution of the network of life and the crucial role played by humans in determining the future of our world Unlike most books on earth history which present the story of life on our planet in terms of one chronological period after another the author discusses Earth s teeming diversity in terms of pivotal evolutionary developments Among these he stresses the importance of symbiosis sex and altruism as key determinants of the Earth s biodiversity Symbiosis when single cells began working together sparked the sudden appearance of complex animals Much later symbiotic relationships led to flowering plants that depended on animals for pollination and seed dispersal With the advent of sexual selection there developed an astonishing world of complex behavior and a dizzying array of life forms In humans sexual selection exerted a great influence on the development of our large brains Altruism when species learned to work together resulted in even greater variety and complexity In early humans altruism gave rise to ever widening social circles and the spread of culture The author also discusses the role of photosynthesis in establishing and maintaining life on earth the evidence for ancient natural catastrophes which caused widespread extinctions and the importance of religion and the recent use of scientific reasoning in the development and the future of the human species This eloquent panoramic perspective is well designed to foster an appreciation for the scope of life on Earth and to encourage wise stewardship of the natural world on which our survival depends

Forgotten Landscapes Stanley A. Rice, 2025-07-15 Rediscover the thriving civilizations of Pre Columbian America and learn how Native ingenuity transformed the landscape into a flourishing world we can still learn from today North America was not empty nor were its inhabitants savages when Europeans arrived in 1492 Quite the opposite North America was thickly populated by indigenous people who lived in clean cities had a thriving economy and transformed the landscape into bountiful productivity Forgotten Landscapes reveals the incredible extent to which Native Americans manipulated and shaped their surrounding environs through agricultural practices and urban engineering resulting in one of the most prosperous civilizations of their time Well before European contact North American cities and villages were bound together by an intricate trade network Today Spiro Mound in rural Oklahoma is a few piles of dirt not on the road to anywhere But at the time of the Mississippian civilization about a thousand years ago it was one of the largest cities in the world With the controlled use of fire Native Americans had transformed thick forests into open woodlands and expanded the ranges of prairies Through organized hunting Natives controlled the populations of prey animals such as passenger pigeons and when Native populations grew large enough they developed agriculture including irrigated crops and even orchards In this fascinating and overdue book author Stanley A Rice shows readers the Pre Columbian landscape of America that has

dialogues *Lawn* Giovanni Alois, 2015-02-20 Object Lessons is a series of short beautifully designed books about the hidden lives of ordinary things A quintessential feature in Western gardens and landscaping the lawn is now at the center of a climate change controversy The large carbon footprint maintenance its unquenchable thirst for fertilizers weedkillers and water and the notorious unfriendliness towards all forms of wildlife have recently attracted criticism and even spurred an anti lawn movement Lawn untangles the colonial capitalist threads that keep our passion for mown grass alive despite mounting evidence that we d be better off without it The lawn is aesthetically and ideologically versatile From museums and hospitals to corporate headquarters and university campuses it has become the verdant lingua franca of institutions of all kinds Its formal homogeneity and neatness imply reliability constancy and solicit our trust But beneath the lawn lies a stratification of intricate ideological and ecological issues that over time have come to define our conception of nature
