Infancy to Early Childhood Robert N. Emde, John K. Hewitt, 2001-04-19 Behavioral genetics is a fast growing multidisciplinary field which attempts to explain the influence of genetic and environmental factors on behavior through the lifespan The preferred investigative technique for teasing out the differences between genetics and the environment is the longitudinal twin study This book is the first complete publication from the MacArthur Longitudinal Twin Study MALTS that is by far the most ambitious and comprehensive longitudinal twin study to date The goal of such an in depth study was not to merely provide thorough descriptions of developmental change between the ages of one and three years but to offer an original theoretical framework that explains how change occurs in different domains and how genetics and the environment influence those changes This rigorous study will set the agenda for developmental psychology and behavioral genetics for decades to come

Ghosts from the Nursery Robin Karr-Morse, Meredith S. Wiley, 2007-12-01. An ominous and persuasive study of when violence starts in child development and the preventive measures to stop it. *The New York Times Book Review*. This new revised edition incorporates significant advances in neurobiological research and includes a new introduction by Dr. Vincent J. Felitti, a leading researcher in the field. When *Ghosts from the Nursery: Tracing the Roots of Violence* was first published, it was lauded for providing scientific evidence that violence can originate in the womb and become entrenched in a child's brain by preschool. The authors' groundbreaking conclusions became even more relevant following the wave of school shootings across the nation, including the tragedies at Columbine High School, Sandy Hook Elementary School, and shocking subsequent shootings. Following each of these, media coverage and public debate turned yet again to the usual suspects concerning the causes of violence: widespread availability of guns and lack of mental health services for late-stage treatment. Discussion of the impact of trauma on human life, especially early in life during chemical and structural formation of the brain, is missing from the equation. Karr-Morse and Wiley continue to shift the conversation among parents and policy makers toward more fundamental preventative measures against violence. Karr-Morse and Wiley boldly raise some tough issues. They start with a grim question: why are children violent, and they forge a passionate and cogent argument for focusing our collective energies on infancy and parenthood to stop the cycle of ruined lives. *The Seattle Times*.
