Trump and Autobiography Nicholas K. Mohlmann, 2021-07-21 The 1970s and 1980s heralded the rise of neoliberalism in United States culture fundamentally reshaping life and work in the United States Corporate culture increasingly penetrated other aspects of American life through popular press CEO autobiographies and management books that encouraged individuals to understand their lives in corporate terms Propelled into the public eye by the publication of 1989's *The Art of the Deal* ostensibly a CEO autobiography Donald Trump has made a career out of reversing the autobiographical impulse presenting an image of his life that meets his narrative needs While many scholars have sought a political precedent for Trump's rise to power this book argues that Trump's aesthetics and life production uniquely primed him for populist political success through their reliance on the tropes of popular corporate culture *Trump and Autobiography* contextualizes Trump's autobiographical works as an extension of the popular corporate culture of the 1980s in order to examine how Trump constructs an image of himself that is indebted to the forms genres and mechanisms of corporate speech and narrative Ultimately this book suggests that Trump's appeal and resilience rest in his ability to signify as though he is a corporation revealing the degree to which corporate culture has reshaped American society's interpretive processes

Social Inclusion: Societal and Organizational Implications for Information Systems Eileen Trauth, Debra Howcroft, Tom Butler, Brian Fitzgerald, Janice DeGross, 2006-09-13 Changes in society resulting from the pervasiveness of information technology have produced positive and negative intended and unintended consequences Key among them is the exclusion of individuals who lack access to technological resources from various societal processes and services The theme of this book social inclusion explores the many dimensions of this exclusion This issue has been the focus of much debate within the social sciences yet has largely been underresearched in the Information Systems field despite our concerns with the social and organizational aspects of technology To the extent that contemporary debates have identified access to information as a key component of poverty digital exclusion is seen as the problem Thus ICTs are portrayed as either exacerbating exclusion or are presented as the solution for greater inclusion This conference will provide us with the opportunity to build upon our strong tradition of studying technology design and use in organizations and expand our field of enquiry to consider the processes that engender social exclusion and the issues that derive from it This theme invites consideration of social and organizational constraints that result in the underrepresentation of certain groups and by implication certain issues Likewise it invites consideration of emerging technologies that have the potential to alter social political and economic relations Much is being written about the ubiquitous nature of ICTs to change society for example open source software has recently emerged as a concept with implications far beyond the technology domain This suggests that the role of ICTs in addressing social exclusion is far more complex than often thought For this reason it is timely to expand our focus and progress the study of IS beyond the organizational level of analysis so that we may consider wider concerns affecting all citizens This book contains the proceedings of the Working Conference on the societal and organizational implications for information systems of social inclusion This conference sponsored by the International Federation for Information Processing Working Group 8.2 was held in Limerick Ireland July 12-15 2006

Artificial Intelligence for a Better Future Bernd Carsten Stahl, 2021-03-17 This open access book proposes a novel approach to Artificial Intelligence AI ethics AI offers many advantages better and faster medical diagnoses improved business processes and efficiency and the automation of boring work But undesirable and ethically problematic consequences are possible too biases and discrimination breaches of privacy and security and societal distortions such as unemployment economic exploitation and weakened democratic processes There is even a prospect ultimately of super intelligent machines replacing humans The key question then is how can we benefit from AI while addressing its ethical problems This book presents an innovative answer to the question by presenting a different perspective on AI and its ethical consequences Instead of looking at individual AI techniques applications or ethical issues we can understand AI as a system of ecosystems consisting of numerous interdependent technologies applications and stakeholders Developing this idea the book explores how AI ecosystems can be shaped to foster human flourishing Drawing on rich

empirical insights and detailed conceptual analysis it suggests practical measures to ensure that AI is used to make the world a better place

The Capability Approach, Technology and Design Ilse Oosterlaken, Jeroen van den Hoven, 2012-03-30 The capability approach of Martha Nussbaum and Amartya Sen places human capabilities at the centre stage of discussions about justice, equality, development and the quality of life. It rejects too much emphasis on mere preference satisfaction or resource provision and highlights the importance of human agency and freedom. This approach has already significantly influenced different fields of application such as economics and development studies. Only recently have scholars started to explore its relevance for and application to the area of technology and design which can be crucial factors in the expansion of human capabilities. How does technology influence human capabilities? What difference could a capability approach make to policies and practices of applying ICT in development processes in the South? How can we criticize and improve the design of technology from the perspective of the capability approach? The authors of this volume explore the implications of the capability approach for technology design and together create the first volume on this emerging topic.

Professionalism in the Information and Communication Technology Industry John Weckert, Richard Lucas, 2013-10-15 Professionalism is arguably more important in some occupations than in others. It is vital in some because of the life and death decisions that must be made, for example in medicine. In others the rapidly changing nature of the occupation makes efficient regulation difficult and so the professional behaviour of the practitioners is central to the good functioning of that occupation. The core idea behind this book is that Information and Communication Technology (ICT) is changing so quickly that professional behaviour of its practitioners is vital because regulation will always lag behind.

DeGross, 2013-06-29 Over the past 20 years the field of information systems has grown dramatically in theoretical diversity and global reach This growth is reflected in the language that policy makers and organizational stakeholders use when they talk about their IT plans As information technology penetrates further into organizational and global life it becomes ever more important to articulate assumptions embedded in the discourse This will help to clarify the complex and yet conceptually improvised or pasted up worldview that becomes embodied in systems The assumptions point to particular domains of discourse The discourse sets up conventions and boundaries It thus shapes what can or cannot legitimately be talked about researched addressed or solved within the scope of IT A number of practical and theoretical topics are discussed in detail including Globalization development and space Mobilization of power ERP systems IS planning and projects Critical research and the study of discourse Public institutions Analytical frameworks This book contains the selected proceedings of the Working Conference on Global and Organizational Discourse About Information Technology sponsored by the International Federation for Information Processing IFIP and held in Barcelona Spain in December 2002
