Sovacool, Scott Victor Valentine, 2012-05-16 This book offers a comprehensive assessment of the dynamics driving and constraining nuclear power development in Asia Europe and North America providing detailed comparative analysis The book formulates a theory of nuclear socio political economy which highlights six factors necessary for embarking on nuclear power programs 1 national security and secrecy 2 technocratic ideology 3 economic interventionism 4 a centrally coordinated energy stakeholder network 5 subordination of opposition to political authority and 6 social peripheralization The book validates this theory by confirming the presence of these six drivers during the initial nuclear power developmental periods in eight countries the United States France Japan Russia the former Soviet Union South Korea Canada China and India The authors then apply this framework as a predictive tool to evaluate contemporary nuclear power trends They discuss what this theory means for developed and developing countries which exhibit the potential for nuclear development on a major scale and examine how the new renaissance of nuclear power may affect the promotion of renewable energy global energy security and development policy as a whole The volume also assesses the influence of climate change and the recent nuclear accident in Fukushima Japan on the nuclear power industry's trajectory This book will be of interest to students of energy policy and security nuclear proliferation international security global governance and IR in general *Energy and Water Development Appropriations for 2008* United States. Comparing Institution-Building in East Asia H. Yoshimatsu, 2014-05-29 Yoshimatsu explores the causes and implications of the diverse degree of institution building in East Asia by examining two processes of initiating and developing multilateral institutions in five policy areas: trade, finance, food security, energy security, and the environment. **Resilient and Adaptive Tokyo** Wanglin Yan, William Galloway, Rajib Shaw, 2024-02-20 Our cities and the systems that support them have not been designed to address the FWE nexus. There exist gaps in awareness of the role and impacts of climate change. Improving communication among stakeholders with the support of scientific evidence is the key to narrowing the gaps. This book approached this issue with a multidisciplinary and transdisciplinary moveable nexus approach through the lens of FWE nexus under the project of the Sustainable Urbanization Global Initiative of Belmont Forum. It presents a collection of evidence science based planning decisions and participatory practices by using Tokyo as the focal area. It visualizes the stock and flow of the Food Water Energy FWE supporting the world's largest metropolitan area, explores how the actors have worked together to secure the resilience and sustainability of resources, and demonstrates the potential of resources in making the city adaptive to climatic and social changes. It is designed for researchers in urbanization, nexus research, urban design, research, environment, disaster risk reduction, and climate change studies, and can be used as a textbook for university courses. It is also a useful tool for practitioners and policymakers in applying collective knowledge to policy and decision making. *System of System Failures* Takafumi Nakamura, 2018-05-09 This book provides the application of praxes in the field of engineering safety by learning from previous system failures. And it addresses the most recent developments in the theoretical and practical aspects of these important fields which, due to their special nature, bring together in a systematic way many disciplines of engineering from the traditional to the most technologically advanced. The authors of these chapters are involved in using the system thinking and system engineering approaches at the scale of increased complexity and advanced computational solutions to such systems. The chapters cover the areas such as failure assessment in aeronautical engineering, seismic resistance of offshore pipeline engineering, electrical engineering, critical infrastructure failure, and system of system theory. **Architecting Resilient Systems** Scott Jackson, 2009-11-19 A complete framework for any organization on achieving resilience in the event of terrorist attacks, natural disasters, or internal failures. The study of resilience encompasses the processes, disciplines, and infrastructure that need to be in place to anticipate and prevent major accidents, survive unprecedented disruptions, and maintain systems operation. *Architecting Resilient Systems* presents a framework for implementation that both public and private organizations can use as a guide to establishing procedures for anticipating, surviving, and recovering from disruptions. Relying on an uncommon level of familiarity with current research and standard ways programs are run in industry, this resource presents principles that may be applied to an extensive number of system types and environments. Coverage includes a systems approach to treating resilience, including both holistic and analytical methods in which systems architecting plays a major role. The management and technical processes

necessary to grasp system resilience and the interaction between them Approaches that depart from accepted practices in industry and government Illuminating case histories from chemical to civil infrastructure to aircraft along with comparisons that identify similarities A discussion of and suggested approaches to dealing with cultural mindsets that can be detrimental to system resilience End of chapter problems Meeting the worldwide demand for an implementation approach to systems resilience this timely guide can be used as a textbook in university courses or as a reference for practicing engineers systems architects technology managers government agencies and any business professional whose role is to plan for natural and human made disruptions Insecure Digital Frontiers Akashdeep Bhardwaj,2024-10-30
