

The automatic drain valve removes condensed water and oil from compressed air systems without interrupting air flow, creating pressure drops or opening the system to the atmosphere. Its unique design maintains system pressure and volume during operation, and increases productivity.

* The high capacity blow tube gives the automatic drain valve twice as much condensate storage capacity during the purging cycle. This larger reservoir is available as an upgrade. A larger reservoir is recommended based on the why-to-aid simplex compressors with long purging cycles and/or operating in extremely humid environments. If the purging cycle exceeds one hour, then an electric timer¹ should be used.

AUTOMATIC DRAIN VALVE TIMER KIT

An automatic drain valve timer kit resolves application problems in which an existing automatic drain valve cycles too infrequently. A timer generates the precise delay for actuating the automatic drain valve. With a timer, the automatic drain valve operates independently of the compressor unload cycles.
