MontiArc - Architectural Modeling and Simulation of Interactive Distributed Systems Arne Haber, 2016-09-02 Formal ADLs offer great potential to analyse the architecture of a system predict the overall performance by using simulations and allow to automatically generate parts of the implementation Nevertheless ADLs are rather not used in industrial practice since several problems hinder to exploit their potential to the full extent This thesis elaborates the design of an ADL that copes with these impediments of ADLs in practice Therefore the design of a lightweight ADL is derived which also provides well defined extension points to be adapted to a certain domain or development process Furthermore it is investigated how architectural modeling can be enriched with agile development methods to support incremental modeling and the validation of system architectures Therefore a set detailed of requirements for architectural modeling and the simulation of system architectures is defined and MontiArc a concrete ADL to model

logical architectures of distributed interactive systems is derived The language is based on the mathematical FOCUS BS01 framework which allows to simulate modeled systems in an event based style Code generators and a simulation framework provide means to continuously refine and test architectural models To add new features or adapt the language to a new domain a corresponding language extension method is presented to extend the syntax language processing tools and code generators of the ADL A lightweight model library concept is presented which allows to develop and reuse component models and their implementation in a controlled and transparent way The developed language the simulator and the language extension techniques have been examined in several case studies which either used or extended MontiArc

DNA Replication Hisao Masai,Marco Foiani,2018-01-22 This book reviews the latest trends and future directions of DNA replication research The contents reflect upon the principles that have been established through the genetic and enzymatic studies of bacterial viral and cellular replication during the past decades The book begins with a historical overview of the studies on eukaryotic DNA replication by Professor Thomas Kelly a pioneer of the field The following chapters include genome wide studies of replication origins and initiation factor binding as well as the timing of DNA replications mechanisms of initiation DNA chain elongation and termination of DNA replication the structural basis of functions of protein complexes responsible for execution of DNA replication cell cycle dependent regulation of DNA replication the nature of replication stress and cells strategy to deal with the stress and finally how all these phenomena are interconnected to genome instability and development of various diseases By reviewing the existing concepts ranging from the old principles to the newest ideas the book gives readers an opportunity to learn how the classical replication principles are now being modified and new concepts are being generated to explain how genome DNA replication is achieved with such high adaptability and plasticity With the development of new methods including cryoelectron microscopy analyses of huge protein complexes single molecular analyses of initiation and elongation of DNA replication and total reconstitution of eukaryotic DNA replication with purified factors the field is enjoying one of its most exciting moments and this highly timely book conveys that excitement to all interested readers

Conceptual and Ethical Challenges of Evolutionary Medicine Ozan Altinok,2023-11-11 This book analyses the concept of disease as defined in the context of evolutionary medicine Upon introducing the reader to evolutionary medicine in its current form and describing its approach to disease instances the book leverages thoughts and instruments of knowledge of epistemology social sciences and ethics to answer the question How can we build a timely and appropriate concept of disease At first it looks at the social concerns of medicalization for example focusing on the suffering of people who have not been diagnosed or whose suffering is not caused by certain elements that falls under the definitions of disease In turn it merges different both conceptual and empirical considerations in one comprehensive analysis with the aim of fostering a multidisciplinary understanding of the phenomenon of disease This book also highlights certain kinds of epistemic injustices that are taking place in the healthcare system as this is currently conceived in post industrial societies

thus offering a timely contribution to the current debate around social justice in healthcare

DNA Replication and Human Disease Melvin L. DePamphilis, 2006 At least 5 trillion cell divisions are required for a fertilized egg to develop into an adult human resulting in the production of more than 20 trillion meters of DNA And yet with only two exceptions the genome is replicated once and only once each time a cell divides How is this feat accomplished What happens when errors occur This book addresses these questions by presenting a thorough analysis of the molecular events that govern DNA replication in eukaryotic cells The association between genome replication and cell proliferation disease pathogenesis and the development of targeted therapeutics is also addressed At least 160 proteins are involved in replicating the human genome and at least 40 diseases are caused by aberrant DNA replication 35 by mutations in genes required for DNA replication or repair 7 by mutations generated during mitochondrial DNA replication and more than 40 by DNA viruses Consequently a growing number of therapeutic drugs are targeted to DNA replication proteins This authoritative volume provides a rich source of information for researchers physicians and teachers and will stimulate thinking about the relevance of DNA replication to human disease

Concurrent Engineering and Design for Manufacture of Electronics Products Sammy G. Shina, 2012-12-06 This book is intended to introduce and familiarize design production quality and process engineers and their managers to the importance and recent developments in concurrent engineering CE and design for manufacturing DFM of new products CE and DFM are becoming an important element of global competitiveness in terms of achieving high quality and low cost products The new product design and development life cycle has become the focus of many manufacturing companies as a road map to shortening new product introduction cycles and to achieving a quick ramp up of production volumes Customer expectations have increased in

demanding high quality functional and user friendly products There is little time to waste in solving manufacturing problems or in redesigning products for ease of manufacture since product life cycles have become very short because of technological breakthroughs or competitive pressures Another important reason for the increased attention to DFM is that global products have developed into very opposing roles either they are commodities with very similar features capabilities and specifications or they are very focused on a market niche In the first case the manufacturers are competing on cost and quality and in the second they are in race for time to market DFM could be a very important competitive weapon in either case for lowering cost and increasing quality and for increasing production ramp up to mature volumes **Prion Proteins** Jörg
