Two Centuries of Experience in Water Resources Management John Lonnquest, Bert Toussaint, Joe Manous, 2015-03-20

Rijkswaterstaat on the horns of a dilemma, 2009 On the one hand it needed its renowned expert status to fulfil its public responsibilities From Flood Safety to Spatial Management Emmy Bergsma, 2018-07-25 This book deals with the introduction of a new type of spatial measures in flood governance In contrast to traditional safety measures that aim to provide protection against floods by building structural flood defenses such as levees and flood walls the goal of spatial measures is to reduce the exposure to flood risks by changing the spatial layout of flood prone areas By limiting developments and flood proofing buildings in areas at risk to flooding investments in structural flood defenses can be circumvented and vulnerabilities reduce World wide spatial measures are gaining attractiveness as a response strategy to increasing flood risks caused by climate change and urbanization The introduction of spatial measures in flood governance involves more than the simple development of new policies and laws Research has demonstrated that the implementation of spatial measures can have huge implications for how costs and responsibilities are divided between different levels of governance and between public and private actors changing the whole organization behind flood governance Both for the effectiveness and for the legitimacy of spatial flood governance strategies it is important that these distributive implications are well understood This book describes the introduction of spatial measures in the context of two very different delta countries the Netherlands and the United States In the United States a spatial flood governance strategy was already developed in the mid 20th century whereas in the Netherlands a safety paradigm institutionalized over the course of the 20th century and spatial measures have only recently been introduced By analyzing the science policy interactions underlying the implementation of spatial measures in both countries this book shows how under the influence of different types of experts engineers in the Netherlands and social geographers in the United States different spatial flood management strategies emerged with different distributive implications each with its own challenges for effectiveness and legitimacy **Testing Faith and Tradition** John Lapp, 2006-10-01 The Anabaptist movement had its beginning in scattered places throughout Europe during the 16th century Today these Anabaptist descended Mennonite churches are declining in membership but they are not without reinvigorated faith and hope Frequent wars during the past 480 years strained these Mennonite churches immeasurably especially when their governments battled each other This volume recounts those torturous and formative experiences Seldom have the distinguishing features of the Dutch the French the German the Swiss the Russian and more recently the U K and the Spanish Mennonite churches been examined These churches cultural and historical differences are significantly unique and they are a key part of the history told in these chapters by European Mennonite historians and church leaders The Umsiedler with their sheer numbers and religious vigor are a current force included in this ongoing story Testing Faith and Tradition is the second volume in the Global Mennonite History Series *The Mennonite*
