

G32V SERIES UNITS

G32V series units are high-efficiency upflow gas furnaces manufactured with DuralokPlus™ aluminized steel clamshell-type heat exchangers. G32V units are available in heating capacities of 75,000 to 125,000 Btuh and cooling applications up to 5 tons. Refer to Engineering Handbook for proper sizing.

Units are factory equipped for use with natural gas. **LP kits are available.** All G32V-1 through -4 units feature the Lennox SureLight™ silicon nitride ignition system. G32V-5 and later units feature the two stage variable speed SureLight integrated control board. The G32V units meet the California Nitrogen Oxides (NO_x) Standards and California Seasonal Efficiency requirements without modification. All units use a two-stage gas valve along with a two-stage combustion air blower. The gas valve is redundant to assure safety shut-off as required by A.G.A. or C.G.A.

All G32V units are equipped with an electronic variable speed (VSM) fan motor. The VSM consists of an ICM2 motor and control module assembly. The VSM maintains a specified air volume throughout the entire external static range.

Information contained in this manual is intended for use by qualified service technicians only. All specifications are subject to change. G32V FURNACE ▲
◀ G32V HEAT EXCHANGE ASSEMBLY

Combustion Process:

1. A call for heat starts the combustion air blower.
2. Outdoor air is drawn through pipe into the burner compartment where it mixes with gas in a conventional style inshot burner.
3. The SureLight ignition system lights the burners.
4. Combustion products are drawn downward through the heat exchanger. Heat is extracted as indoor air passes across the outside surface of the metal.
5. Latent heat is removed from the combustion products as air passes through the coil. Condensate (water) is formed as the combustion products cool.
6. As the combustion products exit the coil, condensate is collected and drained away.
7. Combustion products are pulled from the heat exchanger and forced into the flue.
