Rana,2009-08-18 GECON Grid Economics and Business Models Cloud computing is seen by many people as the natural evolution of Grid computing concepts Both for instance rely on the use of service based approaches for provisioning compute and data resources The importance of understanding business models and the economics of distributed computing systems and services has generally remained unchanged in the move to Cloud computing This understanding is necessary in order to build sustainable infrastructure and businesses around this paradigm of sharing Cloud services Currently only a handful of companies have created successful businesses around Cloud services Among these Amazon and Salesforce with their offerings of Elastic Compute Cloud and force.com among other offerings are the most prominent Both companies understand how to charge for their services and how to enable commercial transactions on them However whether a wide spread adoption of Cloud services will occur has to be seen One key enabler remains the ability to support suitable business models and charging schemes that appeal to users outsourcing part of their internal business functions The topics that have been addressed by the authors of accepted papers reflect the above described situation and the need for a better understanding of Grid economics The topics range from market mechanisms for trading computing resources capacity planning tools for modeling economic
