Initial Function Ideas Lesson 30 Overview	Materials
Students prepare function representations by creating tape diagrams equal to $\frac{1}{2}$ of each function value and by finding other function representations with different circles.	<ul style="list-style-type: none"> <li>Function Cards for students and teacher</li> <li>Large sheet of chart paper for teacher. Supplement Chart for students</li> <li>Function that found the students and provided cards for that day</li> <li>Circle graph divided into sections</li> </ul>

## Teaching Actions

### Warm-Up

Use graph-building activity to show that the functions  $\frac{1}{2}$  and  $\frac{2}{4}$ . Complete the activity – reflect question is correct? Why?

### Large Group Introduction

- Let this introduction connect the whole circle with 1 portion and ask students to find statements to represent the remaining half of the circle. Record responses by circle.

- Report this activity, that this shows, exactly that they have the same area when you compare both the circles. Record results by circle and function name.

1 portion	=	1 whole
1 portion	=	1/2 circle

- Ask what each display has in common. (They all have

## Comments

The idea of representation is preeminent in function representation. To add  $\frac{1}{2} = \frac{2}{4}$ , you will explain that  $\frac{1}{2}$  can be multiplied by  $\frac{2}{2}$  to give  $\frac{2}{4}$ .

Students should find the developed function representation for the given representation  $\frac{1}{2} = \frac{2}{4} = \frac{3}{6}$ .

You are defining equivalent functions by showing that functions are equivalent if they cover the same portion of the circle. Emphasizing in different words that for the function symbols are different, but if it is equal parts, covers the same amount as that is equal parts.

**The Mathematics Lesson-Planning Handbook, Grades 6-8** Lois A. Williams, Beth McCord Kobett, Ruth Harbin Miles, 2018-12-28 Your blueprint to planning Grades 6-8 math lessons that lead to achievement for all learners When it comes to planning mathematics lessons do you sometimes feel burdened Have you ever scrambled for an activity to engage your students that aligns with your state standards Do you ever look at a recommended mathematics lesson plan and think This will never work for my students The Mathematics Lesson Planning Handbook Your Blueprint for Building Cohesive Lessons Grades 6-8 walks you step by step through the process of planning focused research based mathematics lessons that enhance the coherence rigor and purpose of state standards and address the unique learning needs of your individual students This resource deepens the daily lesson planning process for middle school teachers and offers practical guidance for merging routines resources and effective teaching techniques into an individualized and manageable set of lesson plans The effective planning process helps you Identify learning intentions and connect goals to success criteria Select resources and worthwhile tasks that make the best use of instructional materials Structure lessons differently for traditional and block middle school schedules Anticipate student misconceptions and evaluate understanding using a variety of formative assessment techniques Facilitate questioning encourage productive struggle and close lessons with reflection techniques This author team of seasoned mathematics educators make lesson planning practical and doable with a useful lesson planning template and real life examples from Grades 6-8 classrooms Chapter by chapter the decision making strategies empower teachers to plan mathematics lessons strategically to teach with intention and confidence and to build purposeful rigorous coherent lessons that lead to mathematics achievement for all learners Teaching to the Math Common Core State Standards F. D. Rivera, 2015-06-17 This is a methods book for preservice middle level majors and beginning middle school teachers It takes a very practical approach to learning to teach middle school mathematics in an emerging Age of the Common Core State Standards The Common Core State Standards in Mathematics CCSSM is not meant to be the official mathematics curriculum it was purposefully developed primarily to provide clear learning expectations of mathematics content that are appropriate at every grade level and to help prepare all students to be ready for college and the workplace A quick glance at the Table of Contents in this book indicates a serious engagement with the recommended mathematics underlying the Grade 5 through Grade 8 and traditional pathway Algebra I portions of the CCSSM first with issues in content practice assessment learning teaching and classroom management pursued next and in that order In this book we explore what it means to teach to the CCSSM within an alignment mindset involving content practice learning teaching and assessment The Common Core state content standards which pertain to mathematical knowledge skills and applications have been carefully crafted so that they are teachable learnable coherent fewer clearer and higher The practice standards which refer to institutionally valued mathematical actions processes and habits have been conceptualized in ways that will hopefully encourage all middle school

students to engage with the content standards more deeply than merely acquiring mathematical knowledge by rote and imitation. Thus, in the CCSSM, proficiency in content alone is not sufficient and so does practice without content, which is limited. Content and practice are both equally important and thus must come together in teaching, learning, and assessment in order to support authentic mathematical understanding. This blended, multisourced text is a getting smart book. It prepares preservice middle level majors and beginning middle school teachers to work within the realities of accountable pedagogy and to develop a proactive disposition that is capable of supporting all middle school students in order for them to experience growth in mathematical understanding that is necessary for high school and beyond, including future careers. **How**
