*Lessons from Amazonia* Richard O. Bierregaard, Claude Gascon, Thomas E. Lovejoy, Rita Mesquita, 2001-12-11  
Deforestation is occurring at an alarming rate in many parts of the world causing destruction of natural habitat and fragmentation of what remains Nowhere is this problem more pressing than in the Amazon rainforest which is rapidly vanishing in the face of enormous pressure from humans to exploit it This book presents the results of the longest running and most comprehensive study of forest fragmentation ever undertaken the Biological Dynamics of Forest Fragments Project BDFFP in central Amazonia the only experimental study of tropical forest fragmentation in which baseline data are available before isolation from continuous forest took place A joint project of Brazil s National Institute for Research in Amazonia and the U S Smithsonian Institution the BDFFP has investigated the many effects that habitat fragmentation has on plants invertebrates and vertebrates The book provides an overview of the BDFFP reports on its case studies looks at forest ecology and tree genetics and considers what issues are involved in establishing conservation and management guidelines

Kricher, 2017-02-21 The acclaimed guide to the ecology and natural history of the American tropics now fully updated and expanded The New Neotropical Companion is the completely revised and expanded edition of a book that has helped thousands of people to understand the complex ecology and natural history of the most species rich area on Earth the American tropics Featuring stunning color photos throughout it is a sweeping and cutting edge account of tropical ecology that includes not only tropical rain forests but also other ecosystems such as cloud forests rivers savannas and mountains This is the only guide to the American tropics that is all inclusive encompassing the entire region s ecology and the amazing relationships among species rather than focusing just on species identification The New Neotropical Companion is a book

unlike any other Here you will learn how to recognize distinctive ecological patterns of rain forests and other habitats and to interpret how these remarkable ecosystems function everything is explained in clear and engaging prose free of jargon You will also be introduced to the region s astonishing plant and animal life Informative and entertaining The New Neotropical Companion is a pleasurable escape for armchair naturalists and visitors to the American tropics will want to refer to this book before during and after their trip Covers all of tropical America Describes the species and habitats most likely to be observed by visitors Includes every major ecosystem from lowland rain forests to the high Andes Features a wealth of color photos of habitats plants and animals

**Stability of Tropical Rainforest Margins** Teja Tscharntke, Christoph Leuschner, Manfred Zeller, Edi Guhardja, Arifuddin Bidin, 2007-04-26 Tropical rainforests are disappearing at an alarming rate causing unprecedented losses in biodiversity and ecosystem services This book contributes to an improved understanding of the processes that have destabilizing effects on ecological and socio economic systems of tropical rain forest margins as well as striving to integrate environmental technological and socio economic issues in their solution

The Natural History of Primates Robert W. Sussman, Donna Hart, Ian C. Colquhoun, 2022-10-20 The interest in primates from lemurs to gorillas has never been greater Primatologists are continually finding evidence in the behavior and ecology of our closest genetic relatives that sheds light on human origins So just who are these 520 species of complex and intelligent mammals inhabiting the Neotropics Africa Madagascar and Asia The Natural History of Primates provides the most current information on wild primates from experts who have studied them in their natural environments This volume provides up to date facts and figures on how groups of social primates interact with each other and the plants and other animal species in their ecosystems what they eat which predators might eat them how males and females seek mates how infants are raised and myriad other fascinating details about their visual and vocal communication their ability to craft and use tools and the varieties of locomotion they employ As human populations continue to expand into the rainforests savannas and woodlands where nonhuman primates dwell the preservation of these species becomes ever more important The Natural History of Primates is unique in its emphasis on the conservation status of primate species and its ample discussions of how humans and nonhuman primates can coexist in the twenty first century

**New Research on Forest Ecosystems** A. R. Burk, 2005 Ecology is the study of the interrelationships between organisms and their environment including the biotic and abiotic components There are at least six kinds of ecology ecosystem physiological behavioural population and community Specific topics include Acid Deposition Acid Rain Revisited Biodiversity Biocomplexity Carbon Sequestration in Soils Coral Reefs Ecosystem Services Environmental Justice Fire Ecology Floods Global Climate Change Hypoxia and Invasion This new book presents new research on dealing with forest ecosystems

Tropical Ecology John C. Kricher, 2011-02-28 A comprehensive introduction to tropical ecology This full color illustrated textbook offers the first comprehensive introduction to all major aspects of tropical ecology It explains why the world s tropical rain forests are so universally rich in species what factors may contribute to high

species richness how nutrient cycles affect rain forest ecology and how ecologists investigate the complex interrelationships among flora and fauna It covers tropical montane ecology riverine ecosystems savanna dry forest and more Tropical Ecology begins with a historical overview followed by a sweeping discussion of biogeography and evolution and then introduces students to the unique and complex structure of tropical rain forests Other topics include the processes that influence everything from species richness to rates of photosynthesis how global climate change may affect rain forest characteristics and function how fragmentation of ecosystems affects species richness and ecological processes human ecology in the tropics biodiversity and conservation of tropical ecosystems and species Drawing on real world examples taken from actual research Tropical Ecology is the best textbook on the subject for advanced undergraduates and graduate students Offers the first comprehensive introduction to tropical ecology Describes all the major kinds of tropical terrestrial ecosystems Explains species diversity evolutionary processes and coevolutionary interactions Features numerous color illustrations and examples from actual research Covers global warming deforestation reforestation fragmentation and conservation The essential textbook for advanced undergraduates and graduate students Suitable for courses with a field component Leading universities that have adopted this book include Biola University Bucknell University California State University Fullerton Colorado State University Fort Collins Francis Marion University Michigan State University Middlebury College Northern Kentucky University Ohio Wesleyan University St Mary's College of Maryland Syracuse University Tulane University University of California Santa Cruz University of Central Florida University of Cincinnati University of Florida University of Missouri University of New Mexico University of North Carolina at Chapel Hill University of the West Indies

Soil Biodiversity in Amazonian and Other Brazilian Ecosystems F. M. S. Moreira, J. O. Siqueira, L. Brussaard, 2006 The loss of biological diversity has become an increased concern over recent years and is now enshrined in international conventions Most biodiversity in fact occurs in the soil Soil organisms especially bacteria fungi and soil invertebrates play a major role in the formation of soil structure and are primary agents of decomposition and are drivers of nutrient cycling and hence agricultural production This book reviews soil biodiversity in one of the key biodiversity hotspots of the world i.e. the Amazon and nearby regions of Brazil It covers both the tropical savannah and rain forests The work reported is based on a project Conservation and Sustainable Management of Below Ground Biodiversity executed by TSBF CIAT with co-financing from the Global Environment Facility GEF and implementation support from the United Nations Environment Programme UNEP The book represents a major contribution to the literature and will interest those in biodiversity conservation soil science and ecology and biodiversity conservation

**The pollination of cultivated plants: A compendium for practitioners** Food and Agriculture Organization of the United Nations, 2018-10-15 More than twenty years ago the Food and Agriculture Organization of the United Nations contributed to the growing recognition of the role of pollination in agricultural production with the publication of The Pollination of Cultivated Plants in the Tropics Since that time the appreciation of pollinators has

grown alongside the realization that we stand to lose them But our knowledge and understanding of crop pollination pollinator biology and best management practices has also expanded over this time This volume is the first of two compendiums for practitioners sharing expert knowledge on all dimensions of crop pollination in both temperate and tropical zones The focus in this first volume is on applied crop and system specific pollination

**Neotropical Insect Galls** Geraldo Wilson Fernandes, Jean Carlos Santos, 2014-06-26 The book brings to light the most recent findings on the biogeography biodiversity host plant induction and natural history of gall inducing insects in the Neotropical region We attempt to summarize the work done so far in the region promote several syntheses on many aspects such as host induction host specialization distribution among the several vegetation types and zones the origin of super hosts and the mechanisms leading to geographical patterns in their distribution Furthermore the book constructs new perspectives for deeper understanding of galling insect evolutionary ecology and biogeography in the region

**Remote Sensing of Landscapes with Spectral Images** John B. Adams, Alan R. Gillespie, 2018-03-01 Remote Sensing of Landscapes with Spectral Images describes how to process and interpret spectral images using physical models to bridge the gap between the engineering and theoretical sides of remote sensing and the world that we encounter when we venture outdoors The emphasis is on the practical use of images rather than on theory and mathematical derivations Examples are drawn from a variety of landscapes and interpretations are tested against the reality seen on the ground The reader is led through analysis of real images using figures and explanations the examples are chosen to illustrate important aspects of the analytic framework This textbook will form a valuable reference for graduate students and professionals in a variety of disciplines including ecology forestry geology geography urban planning archaeology and civil engineering It is supplemented by a website hosting digital colour versions of figures in the book as well as ancillary images [www.cambridge.org/9780521662214](http://www.cambridge.org/9780521662214)

**Indonesian Primates** Sharon Gursky-Doyen, Jatna Supriatna, 2010-01-15 Indonesia possesses the second largest primate population in the world with over 33 different primate species Although Brazil possesses more primate species Indonesia outranks it in terms of its diversity of primates ranging from prosimians slow lorises and tarsiers to a multitude of Old World Monkey species macaques langurs proboscis monkeys to lesser apes siamangs gibbons and great apes orangutans The primates of Indonesia are distributed throughout the archipelago Partly in response to the number of primates distributed throughout the Indonesian archipelago Indonesia is classified as the home of two biodiversity hotspots Wallacea and Sundaland In order to be classified as a hotspot an area must have a large proportion of endemic species coupled with a high degree of threat including having lost more than 70% of its original habitat Two areas within Indonesia meet these criteria The tremendous diversity of primates in Indonesia in conjunction with the conservation issues facing the primates of this region created a need for this volume

*Ecology of Fragmented Landscapes* Sharon K. Collinge, 2009-06-01 Ask airline passengers what they see as they gaze out the window and they will describe a fragmented landscape a patchwork of desert woodlands farmlands and

developed neighborhoods Once contiguous forests are now subdivided tallgrass prairies that extended for thousands of miles are now crisscrossed by highways and byways Whether the result of naturally occurring environmental changes or the product of seemingly unchecked human development fractured lands significantly impact the planet's biological diversity In *Ecology of Fragmented Landscapes* Sharon K Collinge defines fragmentation explains its various causes and suggests ways that we can put our lands back together Researchers have been studying the ecological effects of dismantling nature for decades In this book Collinge evaluates this body of research expertly synthesizing all that is known about the ecology of fragmented landscapes Expanding on the traditional coverage of this topic Collinge also discusses disease ecology restoration conservation and planning Not since Richard T T Forman's classic *Land Mosaics* has there been a more comprehensive examination of landscape fragmentation *Ecology of Fragmented Landscapes* is critical reading for ecologists conservation biologists and students alike

**Amazonia and Global Change** Michael Keller, Mercedes Bustamante, John Gash, Pedro Silva Dias, 2013-05-02 Published by the American Geophysical Union as part of the Geophysical Monograph Series Volume 186 *Amazonia and Global Change* synthesizes results of the Large Scale Biosphere Atmosphere Experiment in Amazonia LBA for scientists and students of Earth system science and global environmental change LBA led by Brazil asks how Amazonia currently functions in the global climate and biogeochemical systems and how the functioning of Amazonia will respond to the combined pressures of climate and land use change such as Wet season and dry season aerosol concentrations and their effects on diffuse radiation and photosynthesis Increasing greenhouse gas concentration deforestation widespread biomass burning and changes in the Amazonian water cycle Drought effects and simulated drought through rainfall exclusion experiments The net flux of carbon between Amazonia and the atmosphere Floodplains as an important regulator of the basin carbon balance including serving as a major source of methane to the troposphere The impact of the likely increased profitability of cattle ranching The book will serve a broad community of scientists and policy makers interested in global change and environmental issues with high quality scientific syntheses accessible to nonspecialists in a wide community of social scientists ecologists atmospheric chemists climatologists and hydrologists

### **Handbook of Research on the Conservation and Restoration of Tropical Dry Forests**

Bhadouria, Rahul, Tripathi, Sachchidanand, Srivastava, Pratap, Singh, Pardeep, 2019-09-27 Tropical dry forests are the most exploited and endangered ecosystems in the world A combination of climatic and human factors often reduce these forests to patches of dry scrubs or savannas Because these ecosystems experience a more arduous and less anticipated environment they are more prone to environmental stress as plant communities are developed Therefore urgent research is necessary to understand both the detrimental issues and problem solving approaches to conserving these important forests The Handbook of Research on the Conservation and Restoration of Tropical Dry Forests is a pivotal reference source that combines theory and practice on the current trends and issues in this important ecological subject and discusses future challenges towards conservation strategies of these tropical dry forests While highlighting topics such as forest management natural regeneration and silviculture this publication examines the anthropogenic impacts on tropical dry forests and the necessity to rebuild their ecosystems This book is ideally designed for state forest agency professionals resource managers non governmental organization agents ecologists botanists environmentalists students and researchers seeking current research on the threats to these forests
