Rouse, Nicoleta Serban, 2014-07-03. An argument that understanding healthcare delivery as a complex adaptive system will help us design a system that yields better health outcomes. Breakthroughs in medical science, innovations in medical technologies and improvements in clinical practices occur today at an increasingly rapid rate. Yet because of a fragmented healthcare delivery system, many Americans are unable to benefit from these developments. How can we design a system that can provide high quality, affordable healthcare for everyone? In this book, William Rouse and Nicoleta Serban introduce concepts, principles, models and methods for understanding and improving healthcare delivery. Approaching the topic from the perspectives of engineering and statistics, they argue that understanding healthcare delivery as a complex adaptive system will help us design a system that is more efficient, effective and equitable. The authors use multilevel simulation models as a quantitative tool for evaluating alternate ways of organizing healthcare delivery. They employ this approach, for example, in their discussions of affordability, a prevention and wellness program, chronic disease management and primary care accessibility for children in the Medicaid program. They also consider possible benefits from a range of technologies, including electronic health records and telemedicine, data mining as an alternative to randomized trials, conceptual and analytical methodologies that address the complexity of the healthcare system and how these principles, models and methods can enable transformational change. **Space Supporting Africa** Annette Froehlich, André Siebrits, Christoffel Kotze, 2020-12-19. This book addresses the need to support decision makers across Africa by promoting awareness of the importance of space technologies and data to African development through the presentation of existing examples where space supports education and healthcare and by making recommendations for further roll out of these efforts. This is necessary because of the enduring misconception that space-related research and expenditure competes with other more pressing needs on the continent when, in truth, space can play a major role in meeting these needs. Accordingly, the book unpacks the United Nations Sustainable Development Goals (SDGs) 2030 and the critical needs they address in the African context. Secondly, it provides an analysis of the African higher education landscape and considers the network of higher education-related SDGs, their targets and their indicators. Africa's own development plan, Agenda 2063, is also explored. The African higher education landscape is then assessed by way of three models: the Space Education Equation (SEE), the Benefits to Education by Space Transection (BEST) and the Enhanced Education for Sustainable Development Access and Success (EESDAS) model. The critical role of educational technologies and e-learning in bridging the educational access and success gap is appraised, as is the role of the space sector and its technologies, applications and data in African higher

education Finally it explores e health and provides an analysis of pertinent technologies required by e health past and present and the opportunities and challenges it presents Space technology can play a critical role in eliminating the barriers that are currently preventing e health from playing a more significant role in a developing region such as sub Saharan Africa
