Historical GIS Ian N. Gregory, Paul S. Ell, 2007-12-13 Historical GIS is an emerging field that uses Geographical Information Systems GIS to research the geographies of the past Ian Gregory and Paul Ell's study first published in 2007 comprehensively defines this field exploring all aspects of using GIS in historical research A GIS is a form of database in which every item of data is linked to a spatial location This technology offers unparalleled opportunities to add insight and rejuvenate historical research through the ability to identify and use the geographical characteristics of data Historical GIS introduces the basic concepts and tools underpinning GIS technology describing and critically assessing the visualisation analytical and e science methodologies that it enables and examining key scholarship where GIS has been used to enhance research debates The result is a clear agenda charting how GIS will develop as one of the most important approaches to scholarship in historical geography

History and GIS Alexander Lünen, Charles Travis, 2012-12-05 Geographical Information Systems GIS either as standard GIS or custom made Historical GIS HGIS have become quite popular in some historical sub disciplines such as Economic and Social History or Historical Geography Mainstream history however seems to be rather unaffected by this trend More generally speaking Why is it that computer applications in general have failed to make much headway in history departments despite the first steps being undertaken a good forty years ago With the spatial turn in full swing in the humanities and many historians dealing with spatial and geographical questions one would think GIS would be welcomed with open arms Yet there seems to be no general anticipation by historians of employing GIS as a research tool As mentioned HGIS are popular chiefly among Historical Geographers and Social and Economic Historians The latter disciplines seem to be predestined to use such software through the widespread quantitativemethodology these disciplines have employed traditionally Other historical sub disciplines such as Ancient History are also very open to this emerging technology since the scarcity of written sources in this field can be mitigated by inferences made from an HGIS that has archaeological data stored in it for example In most of Modern History however the use of GIS is rarely seen The intellectual benefit that a GIS may bring about seems not be apparent to scholars from this sub

discipline and others This book wants to investigate and discuss this controversy Why does the wider historian community not embrace GIS more readily While one cannot deny that the methodologies linked with a GIS follow geographical paradigms rather than historical ones the potential of GIS as a killer application for digital historical scholarship should be obvious This book brings together authors from Geography and History to discuss the value of GIS for historical research The focus however will not be on the how but on the why of GIS in history *Historical Geography, GIScience and Textual Analysis* Charles Travis, Francis Ludlow, Ferenc Gyuris, 2020-02-29 This book illustrates how literature history and geographical analysis complement and enrich each other's disciplinary endeavors The Hun Lenox Globe constructed in 1510 contains the Latin phrase Hic sunt dracones Here be dragons warning sailors of the dangers of drifting into uncharted waters Nearly half a millennium earlier the practice of earth writing geographia emerged from the cloisters of the great library of Alexandria as a discipline blending the twin pursuits of Strabo's poetic impression of places and Herodotus' chronicles of events and cultures Eratosthenes a librarian at Alexandria and the mathematician Ptolemy employed geometry as another language with which to pursue earth writing From this ancient East Mediterranean fount the streams of literary perception historical record and geographical analysis phenomenological and Euclidean found confluence The aim of this collection is to recover such means and seek the fount of such rich waters by exploring relations between historical geography geographic information science GIS geoscience and textual analysis The book discusses and illustrates current case studies trends and discourses in European American and Asian spheres where historical geography is practiced in concert with human and physical applications of GIS and the broader geosciences and the analysis of text broadly conceived as archival literary historical cultural climatic scientific digital cinematic and media Time as a multi scaled concept again broadly conceived is the pivot around which the interdisciplinary contributions to this volume revolve In *The Landscape of Time* 2002 the historian John Lewis Gaddis posits What if we were to think of history as a kind of mapping He links the ancient practice of mapmaking with the three part conception of time past present and future Gaddis presents the practices of cartography and historical narrative as attempts to manage infinitely complex subjects by imposing abstract grids to frame the phenomena being examined longitude and latitude to frame landscapes and occidental and oriental temporal scales to frame timescapes Gaddis contends that if the past is a landscape and history is the way we represent it then it follows that pattern recognition constitutes a primary form of human perception one that can be parsed empirically statistically and phenomenologically In turn this volume reasons that literary historical cartographical scientific mathematical and counterfactual narratives create their own spatio temporal frames of reference Confluences between the poetic and the positivistic the empirical and the impressionistic the epic and the episodic and the chronologic and the chorologic can be identified and studied by integrating practices in historical geography GIScience geoscience and textual analysis As a result new perceptions and insights facilitating further avenues of scholarship into uncharted waters emerge The various ways in which geographical historical

and textual perspectives are hermeneutically woven together in this volume illuminates the different methods with which to explore terrae incognitae of knowledge beyond the shores of their own separate disciplinary islands **Chinese History in Geographical Perspective** Yongtao Du, Jeff Kyong-McClain, 2013-01-30 The authors in this volume believe that long term profound and sometimes tumultuous changes in the last five hundred years of the history of China have been no less geographical than social political or economic From the dialectics of local empire relations to the imperial state's persistent array of projects for absorbing and transforming ethnic regions on the margins of empire from the tripling of imperial territories in the Qing to the disputes over the identity of the former outer zones in the early Republican era and from the universalistic imagination of all under heaven to the fraught processes of re drawing a new set of nation state boundaries in the twentieth century the study of the dynamics of geography broadly conceived promises to provide insight into the contested development of the geographical entity which we today call China **Advances in Cartography and GIScience. Volume 2** Anne Ruas, 2011-05-02 This book is comprised of a selection of the best papers presented during the 25th International Cartography Conference which was held in Paris between 3rd and 8th July 2011 The scope of the conference covers all fields of relevant GIS and Mapping research subjects such as geovisualization semiotics SDI standards data quality data integration generalization use and user issues spatio temporal modelling and analysis open source technologies and web services digital representation of historical maps history of GIS and cartography as well as cartography for school children and education **Modelling the City** Wiesława Duży, 2024-06-26 Modelling the City focuses on European towns and cities analysing the opportunities and limitations of modelling of urban space This book examines how urban space from the past is discovered explained and presented It discusses the multitude of historical sources mediating the past urban space and the structural technical and epistemological issues raised around building a domain ontology including continuity and change within urban forms and functions Presentation of a formal domain ontology in spatial humanities makes this book unique and worth reading It is strongly recommended to readers interested in the linked open data approach to research data standards in Digital Humanities urban planning and old maps **Historical GIS** Ian N. Ancient Worlds in Digital Culture Claire Clivaz, Paul Dilley, David Hamidović, 2016-08-15 The volume presents a selection of research projects in Digital Humanities applied to the Biblical Studies in the widest sense and context including Early Jewish and Christian studies hence the title Ancient Worlds Taken as a whole the volume explores the emergent Digital Culture at the beginning of the 21st century It also offers many examples which attest to a change of paradigm in the textual scholarship of Ancient Worlds categories are reshaped textuality is re investigated according to its relationships with orality and visualization methods approaches and practices are no longer a fixed conglomeration but are mobilized according to their contexts and newly available digital tools

The Humanities in Transition from Postmodernism into the Digital Age Nigel A. Raab, 2020-05-31 The Humanities in Transition explores how the basic components of the digital age will have an impact on the most trusted theories of humanists Over the past two generations humanists have come to take basic postmodern theories for granted whether on language knowledge or time Yet Michel Foucault Jacques Derrida and similar philosophers developed their ideas when the impact of this digital world could barely be imagined The digital world built on algorithms and massive amounts of data operates on radically different principles This volume analyzes these differences demonstrating where an aging postmodernism cannot keep pace with today's technologies The book first introduces the major influence postmodern had on global thought before turning to algorithms digital space digital time data visuals and the concept to digital forgeries By taking a closer look at these themes it establishes a platform to create more robust humanist theories for the third millennium This book will appeal to graduate students and established scholars in the Digital Humanities who are looking for diverse and energetic theoretical approaches that can truly come to terms with the digital world

GeoHumanities Michael Dear, Jim Ketchum, Sarah Luria, Doug Richardson, 2011-04-14 In the past decade there has been a convergence of transdisciplinary thought characterized by geography's engagement with the humanities and the humanities integration of place and the tools of geography into its

studies GeoHumanities maps this emerging intellectual terrain with thirty cutting edge contributions from internationally renowned scholars architects artists activists and scientists This book explores the humanities rapidly expanding engagement with geography and the multi methodological inquiries that analyze the meanings of place and then reconstructs those meanings to provoke new knowledge as well as the possibility of altered political practices It is no coincidence that the geohumanities are forcefully emerging at a time of immense intellectual and social change This book focuses on a range of topics to address urgent contemporary imperatives such as the link between creativity and place altered practices of spatial literacy the increasing complexity of visual representation in art culture and science and the ubiquitous presence of geospatial technologies in the Information Age GeoHumanities is essential reading for students wishing to understand the intellectual trends and forces driving scholarship and research at the intersections of geography and the humanities disciplines These trends hold far reaching implications for future work in these disciplines and for understanding the changes gripping our societies and our globalizing world Spatial Thinking in Environmental Contexts Sandra Lach

Arlinghaus, Joseph J. Kerski, Ann Evans Larimore, Matthew Naud, 2019-07-11 Spatial Thinking in Environmental Contexts Maps Archives and Timelines cultivates the spatial thinking habit of mind as a critical geographical view of how the world works including how environmental systems function and how we can approach and solve environmental problems using maps archives and timelines The work explains why spatial thinking matters as it helps readers to integrate a variety of methods to describe and analyze spatial temporal events and phenomena in disparate environmental contexts It weaves together maps GIS timelines and storytelling as important strategies in examining concepts and procedures in analyzing real world data and relationships The work thus adds significant value to qualitative and quantitative research in environmental and related sciences Features Written by internationally renowned experts known for taking complex ideas and finding accessible ways to more broadly understand and communicate them Includes real world studies explaining the merging of disparate data in a sensible manner understandable across several disciplines Unique approach to spatial thinking involving animated maps 3D maps GEOMATs and story maps to integrate maps archives and timelines first across a single environmental example and then through varied examples Merges spatial and temporal views on a broad range of environmental issues from traditional environmental topics to more unusual ones involving urban studies medicine municipal governmental application and citizen scientist topics Provides easy to follow step by step instructions to complete tasks no prior experience in data processing is needed Teaching with Technology in the Social Sciences Benjamin Luke

Moorhouse, Sandy S. C. Li, Sebastian Pahs, 2024-01-02 In 2021 the University Grants Committee of Hong Kong the funding body for higher education in Hong Kong initiated a scheme and associated grant fund with the aim of enhancing the use of technology for teaching in higher education institutions in Hong Kong In the Faculty of Social Sciences Hong Kong Baptist University the funding was used to support colleagues in various disciplines to develop teaching and learning projects that

capitalized on technology to improve the educational experiences of students In this book seven project teams from five disciplines Education Geography History Social Work and Sociology share their technological innovations Each chapter presents the design implementation challenges benefits and impact on student learning and experiences of each innovative project Lecturers professors and curriculum designers engaged in teaching and learning will find this book an invaluable resource as it provides ways to integrate technology into their teaching practices Scholars of teaching and learning SoTL will also find the book a useful reference for up to date technological and pedagogical practices in the social science disciplines

The Hierarchies of Slavery in Santos, Brazil, 1822-1888 Ian Read, 2012-01-25 Despite the inherent brutality of slavery some slaves could find small but important opportunities to act decisively The Hierarchies of Slavery in Santos Brazil 1822 1888 explores such moments of opportunity and resistance in Santos a Southeastern township in Imperial Brazil It argues that slavery in Brazil was hierarchical slaves fleeting chances to form families work jobs that would not kill or maim avoid debilitating diseases or find a legal or illegal pathway out of slavery were highly influenced by their demographic background and their owners social position By tracing the lives of slaves and owners through multiple records the author is able to show that the cruelties that slaves faced were not equally shared One important implication is that internal stratification likely helped perpetuate slavery because there was the belief however illusory that escaping captivity was not necessary for social mobility

Creative Ways to apply Historical GIS Jordi Martí-Henneberg, 2023-10-03 This volume promotes the use of Historical GIS H GIS for both education and research It consists of a coherent set of chapters that allow readers to study the spatial histories of cities infrastructure landscapes and more across Europe Each chapter is accompanied by Electronic Supplementary Material ESM including GIS data guides and complementary material in pdf format and more To date there are no similar materials available in this field compiled in a single book Interdisciplinarity in spatial research is a main theme of this volume and the text and tools provided here allow readers to combine inputs relating to the study of earth sciences population urban growth and transportation focusing on changes over both space and time Each chapter provides data in GIS format and also a user s guide to enable readers to deeply engage with the contents themselves Guidelines are provided to help locate new data about other areas of the world which users will be able to develop independently The book is divided into three parts each presenting different scales of study and analysis at the local regional and national levels Part One deals with general subjects analyzed across large areas mainly within Europe Part Two provides more specific subjects and data Part Three covers sources and teaching with H GIS The book will be of interest to researchers academics teachers and students from secondary schools up to university level Each subject and tutorial is aimed at a multi level audience

Routledge Handbook of World-Systems Analysis Salvatore Babones, Christopher Chase-Dunn, 2012-05-31 World systems analysis has developed rapidly over the past thirty years Today s students and junior scholars come to world systems analysis as a well established approach spanning all of the social sciences The best world

systems scholarship however is spread across multiple methodologies and more than half a dozen academic disciplines Aiming to crystallize forty years of progress and lay the groundwork for the continued development of the field the Handbook of World Systems Analysis is a comprehensive review of the state of the field of world systems analysis since its origins almost forty years ago The Handbook includes contributions from a global interdisciplinary group of more than eighty world systems scholars The authors include founders of the field mid career scholars and newly emerging voices Each one presents a snapshot of an area of world systems analysis as it exists today and presents a vision for the future The clear style and broad scope of the Handbook will make it essential reading for students and scholars of anthropology archaeology geography political science history sociology and development economics Geographic Information Systems: Concepts,

Methodologies, Tools, and Applications Management Association, Information Resources, 2012-09-30 Developments in technologies have evolved in a much wider use of technology throughout science government and business resulting in the expansion of geographic information systems GIS is the academic study and practice of presenting geographical data through a system designed to capture store analyze and manage geographic information Geographic Information Systems Concepts Methodologies Tools and Applications is a collection of knowledge on the latest advancements and research of geographic information systems This book aims to be useful for academics and practitioners involved in geographical data

"Dividing the Realm in Order to Govern" Ruth Mostern, 2020-10-26 States are inherently and fundamentally geographical Sovereignty is based on control of territory This book uses Song China to explain how a pre industrial regime organized itself spatially in order to exercise authority On more than a thousand occasions the Song court founded abolished promoted demoted and reordered jurisdictions in an attempt to maximize the effectiveness of limited resources in a climate of shifting priorities to placate competing constituencies and to address military and economic crises Spatial transformations in the Song field administration changed the geography of commerce taxation revenue accumulation warfare foreign relations and social organization and even determined the terms of debates about imperial power The chronology of tenth century imperial consolidation eleventh century political reform and twelfth century localism traced in this book is a familiar one But by detailing the relationship between the court and local administration this book complicates the received paradigm of Song centralization and decentralization Song frontier policies formed a coherent imperial approach to administering peripheral regions with inaccessible resources and limited infrastructure And the well known events of the Song wars and reforms were often responses to long term spatial and demographic change **The Spatial Humanities** David J.

Bodenhamer, John Corrigan, Trevor M. Harris, 2010-06-28 Geographic information systems GIS have spurred a renewed interest in the influence of geographical space on human behavior and cultural development Ideally GIS enables humanities scholars to discover relationships of memory artifact and experience that exist in a particular place and across time Although successfully used by other disciplines efforts by humanists to apply GIS and the spatial analytic method in their studies have

been limited and halting The Spatial Humanities aims to re orient and perhaps revolutionize humanities scholarship by critically engaging the technology and specifically directing it to the subject matter of the humanities To this end the contributors explore the potential of spatial methods such as text based geographical analysis multimedia GIS animated maps deep contingency deep mapping and the geo spatial semantic web
