Losing Our Minds Lucy Foulkes, 2025-10-16 A compelling and incisive book that questions the overuse of mental health terms to describe universal human emotions Public awareness of mental illness has been transformed in recent years but our understanding of how to define it has yet to catch up Too often psychiatric disorders are confused with the inherent stresses and challenges of human experience A narrative has taken hold that a mental health crisis has been building among young people In this profoundly sensitive and constructive book psychologist Lucy Foulkes argues that the crisis is one of ignorance as much as illness Have we raised a snowflake generation Or are today s young people subjected to greater stress exacerbated by social media than ever before Foulkes shows that both perspectives are useful but limited The real question in need of answering is how should we distinguish between normal suffering and actual illness Drawing on her extensive knowledge of the scientific and clinical literature Foulkes explains what is known about mental health problems how they arise why they so often appear during adolescence the various tools we have to cope with them but also what remains unclear distinguishing between normality and disorder is essential if we are to provide the appropriate help but no clear line between the two exists in nature Providing necessary clarity and nuance *Losing Our Minds* argues that the widespread misunderstanding of this aspect of mental illness might be contributing to its apparent prevalence

grief offering solace understanding and a pathway toward healing **Mind After Loss** Forest Mindscape, AI, 2025-02-18

Mind After Loss explores the neurobiological aspects of grief recovery proposing that healing from bereavement is not solely an emotional journey but also a process of neurobiological adaptation. The book reveals how grief profoundly impacts brain function influencing cognitive processes and potentially leading to cognitive disorganization. Intriguingly research shows that the brain exhibits neuroplasticity rewiring itself after loss to accommodate new realities. The book progresses systematically first establishing the neurobiological basis of emotion then detailing the brain's acute response to loss. It examines adaptive processes like cognitive restructuring and finally discusses therapeutic interventions and lifestyle adjustments to aid recovery. By integrating neuroscience with psychological theories the book offers a unique science informed perspective on grief moving beyond purely emotional care. This book's value lies in its interdisciplinary approach connecting psychology neuroscience and cognitive science to offer a holistic understanding of grief. It's particularly useful for therapists and individuals seeking evidence based strategies to support psychological healing and understand the neurobiological impact of grief and bereavement. It emphasizes that through understanding these processes we can foster resilience and promote effective coping strategies ultimately facilitating healthier grief recovery.
