Hubris And Hybrids A Cultural History Of Technology And Science:

Hubris and Hybrids Mikael Hård, Andrew Jamison, 2013-09-13 Human societies have not always taken on new technology in appropriate ways Innovations are double edged swords that transform relationships among people as well as between human societies and the natural world Only through successful cultural appropriation can we manage to control the hubris that is fundamental to the innovative enterprising human spirit and only by becoming hybrids combining the human and the technological will we be able to make effective use of our scientific and technological achievements This broad cultural history of technology and science provides a range of stories and reflections about the past discussing areas such as film industrial design and alternative environmental technologies and including not only European and North American but also Asian examples to help resolve the contradictions of contemporary high tech civilization

History of Technology Volume 29 Ian Inkster, 2016-09-30 The common question from the western point of view is of the sort why did China lose its early leadership of productive technologies to Europe during the early modern period Answers to this seemingly clear enquiry vary from general cultural inwardness to the interferences of imperial governance This collection surveys such theories but alters the issue by raising the notion that Chinese technologies did not so much fail as move along a path different from that of Europe Our second collection on the Mindful Hand also shifts common ground by querying and modifying common views of the links between knowledge and technique in early modern European development Scientific or related knowledge was not brought to technique as a socio cultural gift from an educated elite to the working man Rather educated gents practitioners instrument makers craftsfolk and technicians of all kinds intermingled both socially and in terms of the recognition of technical problems as well as in the assemblage of the mental commercial and cognitive resources required to pursue innovative production projects

Microhistories of Technology Mikael Hård, 2023-02-20 In this open access book Mikael Hård tells a story of how people around the world challenged the production techniques and products brought by globalization Retaining their autonomy and freedom creative individuals selectively adopted or rejected

modern gadgets tools and machines In standard historical narratives globalization is portrayed as an unstoppable force that flattens all obstacles in its path Modern technology is also seen as inexorable in the nineteenth century steamships telegraph lines and Gatling guns are said to have paved the way for colonialism and other forms of dominating people and societies Later shipping containers and computer networks purportedly pulled the planet deeper into a maelstrom of capitalism H rd discusses instances that push back against these narratives For example in Soviet times inhabitants of Samarkand Uzbekistan preferred to remain in and expand their own mud brick houses rather than move into prefabricated concrete residential buildings Similarly nineteenth century Sumatran carpenters ignored the saws brought to them by missionaries and chose to chop down trees with their arch bladed adzes And people in colonial India successfully competed with capitalist run Caribbean sugar plantations continuing to produce their own muscovado and sell it to local consumers This book invites readers to view the history of technology and material culture through the lens of diversity Based on research funded by the European Research Council and conducted in the Global South Microhistories of Technology Making the World shows that the spread of modern technologies did not erase artisanal production methods and traditional tools *The Making of Green Engineers* Andrew Jamison, 2022-06-01 This book discusses the ways in which engineering educators are responding to the challenges that confront their profession On the one hand there is an overarching sustainability challenge the need for engineers to relate to the problems brought to light in the debates about environmental protection resource depletion and climate change There are also a range of societal challenges that are due to the permeation of science and technology into ever more areas of our societies and everyday lives and finally there are the intrinsic scientific and technological challenges stemming from the emergence of new fields of technosciences that mix science and technology in new combinations In the book the author discusses and exemplifies three contending response strategies on the part of engineers and engineering educators a commercial strategy that links scientists and engineers into networks or systems of innovation an academic strategy that reasserts the traditional values of science and engineering and an integrative strategy that aims to combine scientific knowledge and engineering skills with cultural understanding and social responsibility by fostering what the author terms a hybrid imagination Professor Jamison combines scholarly analysis with personal reflections drawing on over forty years of experience as a humanist teaching science and engineering students about the broader social political and cultural contexts of their fields The book has been written as part of the Program of Research on Opportunities and Challenges in Engineering Education in Denmark PROCEED funded by the Danish Strategic Research Council for which Professor Jamison has served as coordinator *Sustainability Networks* Janne Hukkinen, 2008-08-18 Sustainability is a word that means different things depending on who is using it thus underlining the potential problems involved in experts from different fields teaming up to tackle sustainability problems In this book Janne Hukkinen argues for a reflexive approach to sustainability as a means of coming to grips with the threatening challenges arising out of human environment interaction The author

illustrates his argument with a case study of natural resource management in Lapland showing how sustainability is understood holistically by academics and professionals alike This book reflects an emerging cognitive turn in sustainability sciences conceptualizing environmental challenges during action on our social and material environments rather than in isolation Hukkinen argues that this conceptual blending enables sustainability experts to hybridize themselves to immerse themselves in the fields of other experts and imagine the other s work both prerequisites of trans disciplinary knowledge integration This book shows how sustainability experts can reveal their intellectual engagements when designing scenarios and indicators and presents a rigorous framework for organizing expert collaboration

Alternative Pathways in Science and Industry David J. Hess,2007-03-16 In *Alternative Pathways in Science and Industry* David Hess examines how social movements and other forms of activism affect innovation in science technology and industry Synthesizing and extending work in social studies of science and technology social movements and globalization Hess explores the interaction of grassroots environmental action and mainstream industry and offers a conceptual framework for understanding it Hess proposes a theory of scientific and technological change that considers the roles that both industry and grassroots consumers play in setting the research agenda in science and technology and he identifies alternative pathways by which social movements can influence scientific and technological innovation He analyzes four of these pathways industrial opposition movements organized against targeted technologies as in the campaign against nuclear energy technology and product oriented movements which press for alternatives as does the organic food movement localism which promotes local ownership as in buy local campaigns and access pathways which support a more equitable distribution of resources Within each pathway Hess examines reforms in five different areas agriculture energy waste and manufacturing infrastructure and finance The book s theoretical argument and empirical evidence demonstrate the complex pattern of incorporation of grassroots innovations and transformation of alternative ownership structures and the alternative products themselves that has characterized the relationship of industry and activism Hess s analysis of alternative pathways to change suggests ways economic organizations could shift to a more just and sustainable course in the twenty first century

The Cultural Side of Innovation Dany Jacobs,2013-11-12 In most discussions about the knowledge based economy innovation is associated or even equated with technology while culture s influence is ignored Innovation is however embedded in cultural and social contexts and neglecting these crucial contexts may impede an innovation s diffusion and eventual success This book places culture at the center of discussions on innovation beginning with a comprehensive introduction to innovation s various forms including the history sociology and economics of innovation Insights from marketing and psychology are integrated into a complexity theory framework which are then utilized to evaluate case studies of organizations experiencing repeated innovation successes The sometimes fraught relationship of firms to creativity is discussed and a new model for calculating the creativity of an economy is presented

The Ethics of Nanotechnology, Geoengineering, and Clean Energy Andrew Maynard, Jack Stilgoe, 2020-07-26 Nanotechnology clean technology and geoengineering span the scale of human ingenuity from the imperceptibly small to the unimaginably large Yet they are united by a commonality of ethics that permeates how and why they are developed and how the resulting consequences are managed The articles in this volume provide a comprehensive account of current thinking around the ethics of development and use within each of the technological domains and addresses challenges and opportunities that cut across all three In particular the collection provides unique insights into the ethics of noumenal technologies technologies that are impossible to see or detect or conceive of with human senses or conventional tools This collection will be of relevance to anyone who is actively involved with ensuring the responsible and sustainable development of nanotechnology geoengineering or clean technology

Green Engineering Riadh Habash, 2017-11-07 This is a primary text project that combines sustainability development with engineering entrepreneurship and design to present a transdisciplinary approach to modern engineering education The book is distinguished by extensive descriptions of concepts in sustainability its principles and its relevance to environment economy and society It can be read by all engineers regardless of their disciplines as well as by engineering students as they would be future designers of products and systems This book presents a flexible organization of knowledge in various fields which allows to be used as a text in a number of courses including for example engineering entrepreneurship and design engineering innovation and leadership and sustainability in engineering design

Engineering, Development and Philosophy Steen Hyldgaard Christensen, Carl Mitcham, Bocong Li, Yanming An, 2012-10-30 This inclusive cross cultural study rethinks the nexus between engineering development and culture It offers diverse commentary from a range of disciplinary perspectives on how the philosophies of today's cultural triumvirate American European and Chinese are shaped and given nuance by the cross fertilization of engineering and development Scholars from the humanities and social sciences as well as engineers themselves reflect on key questions that arise in this relational context such as how international development work affects the professional views identities practice and ethics of engineers The first volume to offer a systematic and collaborative study that cuts across continental boundaries the book delineates the kinds of skills and competences that tomorrow's engineering success stories will require and analyzes fascinating aspects of the interplay

between engineering and philosophy such as how traditionally Chinese ways of thinking can influence modern engineering practice in the world's most populous country China's problematic mix of engineering woes and wonders from the high profile crash on its high profile rail network to its bird's nest Olympic stadium adds to the urgency for reform while Europe's Enlightenment informed legal frameworks are contrasted with Chinese mechanisms in their governance of the field of nanotechnology a crucial element of future technical evolution Fascinating and compelling in equal measure this volume addresses one of the topics at the leading edge of humanity's quest to survive and to thrive

Transitions to Sustainable Development John Grin, Jan Rotmans, Johan Schot, 2010-05-26 There has been a growing concern about the social and environmental risks which have come along with the progress achieved through a variety of mutually intertwined modernization processes This book addresses how to understand the dynamics and governance of long term transformative change towards sustainable development
