HUMAN EVOLUTION : A VERY SHORT INTRODUCTION. WOOD BERNARD., 2013 *Human Evolution* Bernard A. Wood, 2019 The study of human evolution is advancing rapidly New fossil evidence is adding ever more pieces to the puzzle of our past the new science of ancient DNA is completely reshaping theories of early human populations and migrations Bernard Wood traces the field of palaeoanthropology from its beginnings in the eighteenth century to the present

The Science of Human Origins Claudio Tuniz, Giorgio Manzi, David Caramelli, 2016-09-17 Our understanding of human origins has been revolutionized by new discoveries in the past two decades In this book three leading paleoanthropologists and physical scientists illuminate in friendly accessible language the amazing findings behind the latest theories They describe new scientific and technical tools for dating DNA analysis remote survey and paleoenvironmental assessment that enabled recent breakthroughs in research They also explain the early development of the modern human cortex the evolution of symbolic language and complex tools and our strange cousins from Flores and Denisova

The ^ASeven Pillars of Creation William P. Brown, 2010-02-26 Brown embarks on an unprecedented tour of the various creation traditions of Scripture seven total in conversation with the natural sciences The result is a groundbreaking work that recaptures the genuine awe that drives the best of scientific and theological inquiry the wonder that unites the psalmist and the scientist

Introductory Readings in Anthropology Hilary Callan, Brian Street, Simon Underdown, 2013-03-15 Anthropology seeks to understand the roots of our common humanity the diversity of cultures and world views and the organisation of social relations and practices As a method of inquiry it embraces an enormous range of topics and as a discipline it covers a multitude of fields and themes as shown in this selection of original writings As an accessible entry point for upper level students and first year undergraduates new to the study of anthropology this reader also offers guidance for teachers in exploring the subject's riches with their students That anthropology is an immensely expansive inquiry of study is demonstrated by the diversity of its topics from nature conservation campaigns to witchcraft beliefs from human evolution to fashion and style and from the repatriation of indigenous human remains to research on literacy There is no single story of anthropology Taken together these fundamental readings are evidence of a contemporary vibrant subject that has much to tell us about all the worlds in which we live

Quantum Information and Consciousness Danko D. Georgiev, 2017-12-06 I loved the book This book is not just interesting it is exciting I have probably read every significant book in the field and this is the strongest and most convincing one yet It is also one of the most comprehensive in its explanations I shall most certainly recommend the book to colleagues Richard G Petty MD a very good introduction to the

basic theory of quantum systems Dr Georgiev's book aptly prepares the reader to confront whatever might be in store later from the Foreword by Prof James F Glazebrook Eastern Illinois University This book addresses the fascinating cross disciplinary field of quantum information theory applied to the study of brain function It offers a self study guide to probe the problems of consciousness including a concise but rigorous introduction to classical and quantum information theory theoretical neuroscience and philosophy of the mind It aims to address long standing problems related to consciousness within the framework of modern theoretical physics in a comprehensible manner that elucidates the nature of the mind body relationship The reader also gains an overview of methods for constructing and testing quantum informational theories of consciousness

Diseased existents or existent diseases? Walter Lips, 2024-10-01 This book aims to cover both the ontological determination and the characterization of what we call with terms such as disease and others related The current edition is a more complete version of the first edition in Spanish that was published four years ago In this edition both semantic and gnoseological as well as ontological issues have been developed in more detail and depth The foregoing is due to the fact that we could establish the meaning of the disease concept based on its explicit ontological reference namely the question about the existence of disease Furthermore to achieve that aim it is appropriate to consider the essential properties of live systems Consequently this edition has reviewed in greater depth what is related to bioplasticity and macromolecular interactive processes of live systems including epigenetic processes

Ancestors and Relatives Eviatar Zerubavel, 2012-01-26 Noted social scientist Eviatar Zerubavel casts a critical eye on how we trace our past individually and collectively arguing that rather than simply find out who our ancestors are from genetics or history we actually create the stories that make them our ancestors

Kaleidoscopic Grammar Junichi Toyota, 2020-06-12 This monograph deals with binary features in the evolution of human civilisation and cognition with a particular focus on language Our life is surrounded by various pairs of binary features and this is termed binarism in this work Binarism is pervasive ranging from nature biological to culture anthropological and archaeological and without a doubt to language Binarism serves as a good base for further development and as a system becomes more complex binarism is broken and more complex systems involving third or fourth options emerge In the case of language the earliest human language as argued here consisted only of nouns however these nouns had a distinction between active and inactive nouns The active nouns referred to action or productivity which later turned into verbs and inactive nouns stayed as nouns It was during this period that language became equipped with a base to develop further with a distinction between noun and verb This is the onset of various changes towards the complexity of modern languages essentially kaleidoscopic grammar Various changes in language stem from binarism and as languages evolve the pairs such as noun v verb are broken and a grammatical system in general becomes more complex The importance of binarism is not restricted to language and it is a powerful tool in evolution at different levels The pervasiveness of binarism is a specific feature that should not be overlooked in evolution as a whole

Natural Novelty Richard Boyle,2015-12-15 Novelty is real Cause effect relationships come into existence that cannot be attributed to repetition of the relationships that came before them This idea is relevant to everything from historical sciences philosophy religion to our own subjective experience But why in the most general possible sense do new things happen It is argued here that novelty results from a kind of symbiosis between systems that function in similar ways but are made from different stuff Similarly novelty within consciousness derives from an interactive overlap between logical thought that is representable in language and subjective thought that is not These ideas are developed through a consideration of a conceptual history of the new a logical formalization of how novelty occurs a discussion of the relevance of novelty to scientific questions surrounding Earth life and consciousness and an integrative reading of the respective philosophies of Ludwig Wittgenstein and Martin Heidegger Biofictions Josie Gill,2020-02-20 This book is open access and available on www.bloomsburycollections.com It is funded by Knowledge Unlatched Winner of the 2020 British Society for Literature and Science book prize In this important interdisciplinary study Josie Gill explores how the contemporary novel has drawn upon and intervened in debates about race in late 20th and 21st century genetic science Reading works by leading contemporary writers including Zadie Smith Kazuo Ishiguro Octavia Butler and Colson Whitehead Biofictions demonstrates how ideas of race are produced at the intersection of science and fiction which together create the stories about identity racism ancestry and kinship which characterize our understanding of race today By highlighting the role of narrative in the formation of racial ideas in science this book calls into question the apparent anti racism of contemporary genetics which functions narratively rather than factually or objectively within the racialized contexts in which it is embedded In so doing Biofictions compels us to rethink the long asked question of whether race is a biological fact or a fiction calling instead for a new understanding of the relationship between race science and fiction **MATLAB® and Design Recipes for Earth Sciences** Martin Trauth,Elisabeth Sillmann,2012-09-14 The overall aim of the book is to introduce students to the typical course followed by a data analysis project in earth sciences A project usually involves searching relevant literature reviewing

and ranking published books and journal articles extracting relevant information from the literature in the form of text data or graphs searching and processing the relevant original data using MATLAB and compiling and presenting the results as posters abstracts and oral presentations using graphics design software The text of this book includes numerous examples on the use of internet resources on the visualization of data with MATLAB and on preparing scientific presentations As with its sister book MATLAB Recipes for Earth Sciences 3rd Edition 2010 which demonstrates the use of statistical and numerical methods on earth science data this book uses state of the art software packages including MATLAB and the Adobe Creative Suite to process and present geoscientific information collected during the course of an earth science project The book s supplementary electronic material available online through the publisher s website includes color versions of all figures recipes with all the MATLAB commands featured in the book the example data exported MATLAB graphics and screenshots of the most important steps involved in processing the graphics
