Abstract-The improvements in the development of computer technology has contributed to the concept of the Human Computer Interactions (HCI) since the computer systems has the interfaces which can easily be used by humans. The mental models show the way different users perceive how the computer systems behave in solving the problems in the environment. The young educated and knowledgeable individuals have been able to carry out research on the developments of computer systems and the success of the human computer interfaces for mental models. The human computer interfaces are designed in such a way that they are connected the user's mental models thus providing them with the easier execution of work. In this paper the mental model in Human computer interface will be discussed. Also, the paper focused on the fidelity prototyping which involved the incorporation of the emotional intelligence of the users to develop into more user like as they interact with the computer interface. In addition, the paper will also focus on the different approaches which may be employed in a single human computer interface design, the results of the mental models as well as the emerging trends of HCI which are aimed at improving the human – computer interaction. The results showed that individuals have differences which influences the ability to execute programs on the computer interfaces. This was found to result from the differences in their mental models to those of the designers of the human computer interfaces thus making them face more difficult when interacting with the computer systems.

I. Introduction

Human Computer Interaction (HCI) refers to the process and the study of designing different computer interfaces and determining their usability by keeping the mental of the anticipated user in mind [1]. It therefore creates a strong relationship between the computer and the human beings, the mutual understandings of the humans and the creation of the computer system software which will simplify the work of the user on such systems of the computers, boosting the morale of the humans to use the interface and should be able to boost their ability to use the computer interfaces designed. The human computer interaction consists of three parts derived from the name, that is, the human, computer and the interaction. HCI contributes to the sketching of the fidelity on both the low and the high ends which gives it the ability to respond to the feedback of the users and interprets the feedback fed into the system by the user. This focuses on the mental models in the HCI and the advantages and the disadvantages of the human computer interfaces design in mental models. In this paper, the human computer interaction parts will also be discussed and also the different approaches which may be used to design the HCI.

II. Human Computer Interaction Development Process

The development process of human computer interaction involves the relationship between the human, the computer interacting together to perform various tasks and generates the feedback reports to the user according to the type of

Readings in Human-Computer Interaction Ronald M. Baecker, 2014-06-28 The effectiveness of the user computer interface has become increasingly important as computer systems have become useful tools for persons not trained in computer science In fact the interface is often the most important factor in the success or failure of any computer system Dealing with the numerous subtly interrelated issues and technical behavioral and aesthetic considerations consumes a large and increasing share of development time and a corresponding percentage of the total code for any given application A revision of one of the most successful books on human computer interaction this compilation gives students researchers and practitioners an overview of the significant concepts and results in the field and a comprehensive guide to the research literature Like the first edition this book combines reprints of key research papers and case studies with synthesizing survey material and analysis by the editors It is significantly reorganized updated and enhanced over 90% of the papers are new An invaluable resource for systems designers cognitive scientists computer scientists managers and anyone concerned with the
