Humankind Alexander H Harcourt, 2016-05-03 Where did the human species originate why are tropical peoples much more diverse than those at polar latitudes and why can only Japanese peoples digest seaweed In *Humankind* U C Davis professor Alexander Harcourt answers these questions and more as he explains how the expansion of the human species around the globe and our interaction with our environment explains much about why humans differ from one region of the world to another not only biologically but culturally What effects have other species had on the distribution of humans around the world and we in turn on their distribution And how have human populations affected each other s geography even existence For the first time in a single book Alexander Harcourt brings these topics together to help us understand why we are what we are where we are It turns out that when one looks at humanity s expansion around the world and in the biological explanations for our geographic diversity we humans are often just another primate just another species Humanity s distribution around the world and the type of organism we are today has been shaped by the same biogeographical forces that shape other species
