Human Evolution Language And Mind A Psychological And Archaeological Inquiry:

Human Evolution, Language and Mind William Noble, Iain Davidson, 1996-07-26 The question of how modern human behaviour emerged from pre human hominid behaviour is central to discussions of human evolution This important book argues that the capacity to use signs in a symbolic way identified by the authors as language is the basis for behaviour that can be described as human The book is the product of a unique collaboration between the key disciplines in the debate about human evolution and mentality psychology and archaeology It investigates the significance and nature of the emergence of linguistic behaviour The text critically examines the archaeological record of hominid evolution and argues that linguistic behaviour emerged no earlier than 100 000 years ago The book s interdisciplinary approach allows critical attention to be given to an impressively broad range of relevant literature For the first time all the known pieces of this evolutionary puzzle are examined in detail

Crow, 2004-01-08 This is the first volume to address directly the question of the speciation of modern Homo sapiens The subject raises profound questions about the nature of the species our defining characteristic it is suggested it is language and the brain changes and their genetic basis that make us distinct The British Academy and the Academy of Medical Sciences have brought together experts from palaeontology archaeology linguistics psychology genetics and evolutionary theory to present evidence and theories at the cutting edge of our understanding of these issues These essays will be vital reading for anyone interested in the nature and origins of the species and specifically human abilities

New Perspectives on the Origins of Language Claire Lefebvre, Bernard Comrie, Henri Cohen, 2013-11-15 The question of how language emerged is one of the most fascinating and difficult problems in science In recent years a strong resurgence of interest in the emergence of language from an evolutionary perspective has been helped by the convergence of approaches methods and

ideas from several disciplines The selection of contributions in this volume highlight scenarios of language origin and the prerequisites for a faculty of language based on biological historical social cultural and paleontological forays into the conditions that brought forth and favored language emergence augmented by insights from sister disciplines The chapters all reflect new speculation discoveries and more refined research methods leading to a more focused understanding of the range of possibilities and how we might choose among them There is much that we do not yet know but the outlines of the path ahead are ever clearer

Sandage, 2006-06-01 The twenty first century has given rise to a growing interest in the intersection of science religion and spirituality Few books address these issues from multiple perspectives and theories To fill this void F LeRon Shults and Steven Sandage coauthors of *The Faces of Forgiveness* winner of the Narramore Award from the Christian Association for Psychological Studies continue their interdisciplinary dialogue in their latest work *Transforming Spirituality* In this book Shults and Sandage address the subject of spiritual transformation through the lenses of psychology and theology In addition to college and seminary students *Transforming Spirituality* will appeal to readers interested in Christian spirituality What is more it provides helpful insights for counselors psychologists and others who work in the mental health field

The Evolutionary Emergence of Language Rudolf Botha, Martin Everaert, 2013-07-25 Leading primatologists cognitive scientists anthropologists and linguists consider how language evolution can be understood by means of inference from the study of linked or analogous phenomena in language animal behaviour genetics neurology culture and biology

History of Language Steven Roger Fischer, 2004-10-03 It is tempting to take the tremendous rate of contemporary linguistic change for granted What is required in fact is a radical

reinterpretation of what language is Steven Roger Fischer begins his book with an examination of the modes of communication used by dolphins birds and primates as the first contexts in which the concept of language might be applied As he charts the history of language from the times of Homo erectus Neanderthal humans and Homo sapiens through to the nineteenth century when the science of linguistics was developed Fischer analyses the emergence of language as a science and its development as a written form He considers the rise of pidgin creole jargon and slang as well as the effects radio and television propaganda advertising and the media are having on language today Looking to the future he shows how electronic media will continue to reshape and re invent the ways in which we communicate a delightful and unexpectedly accessible book a virtuoso tour of the linguistic world The Economist few who read this remarkable study will regard language in quite the same way again The Good Book Guide

The Material Life of Human Beings Michael Brian Schiffer,2002-01-22 In this ground breaking work the distinguished anthropological theorist Michael Brian Schiffer presents a profound challenge to the social sciences Through a broad range of examples he demonstrates how theories of behaviour and communication have too often ignored the fundamental importance of objects in human life In The Material Life of Human Beings the author builds upon the premise that the most important feature of human life is not language but the relationships which take place between people and objects The author shows that artifacts are involved in all modes of human communication be they visual auditory or tactile By creatively folding elements of postmodernist thought into a scientific framework he creates new concepts and models for understanding and analysing communication and behavior Challenging established theories within the social sciences Michael Brian Schiffer offers a reassessment of the centrality of materiality to everyday life

A History of Language Steven Roger Fischer,2018-06-15 This second edition of Steven Roger Fischer s fascinating book charts the history of communication from a time before human language was conceived of to the media explosion of the present day Fischer begins by describing the modes of communication used by whales birds insects and nonhuman primates suggesting these are the first contexts in which the concept of language might be applied He then moves from the early abilities of Homo erectus to the spread of languages worldwide analyzing the effect of the development of writing along the way With the advent of the science of linguistics in the nineteenth century the nature of human languages first came to be studied and understood Fischer follows the evolution of linguists insights and the relationship of language to social change into the mid 1900s Taking into account the rise of pidgin Creole jargon and slang he goes on to raise provocative questions about literature s and literacy s relationship to language Finally touching on the effects of radio television propaganda and advertising Fischer looks to the future asking how electronic media are daily reshaping the world s languages and suggesting a radical reinterpretation of what language really is

Theology and Evolutionary Anthropology Celia Deane-Drummond,Agustín Fuentes,2020-01-29 This book sets out some of the latest scientific findings around the evolutionary development of religion and faith and then explores their theological implications This unique combination of

perspectives raises fascinating questions about the characteristics that are considered integral for a flourishing social and religious life and allows us to start to ask where in the evolutionary record they first show up in a distinctly human manner The book builds a case for connecting theology and evolutionary anthropology using both historical and contemporary sources of knowledge to try and understand the origins of wisdom humility and grace in deep time In the section on wisdom the book examines the origins of complex decision making in humans through the archaeological record recent discoveries in evolutionary anthropology and the philosophical richness of semiotics The book then moves to an exploration of the origin of characteristics integral to the social life of small scale communities which then points in an indirect way to the disposition of humility Finally it investigates the theological dimensions of grace and considers how artefacts left behind in the material record by our human ancestors and the perspective they reflect might inform contemporary concepts of grace This is a cutting edge volume that refuses to commit the errors of either too easy a synthesis or too facile a separation between science and religion As such it will be of interest to scholars of religious studies and theology especially those who interact with scientific fields as well as academics working in anthropology of religion

The Peopling of Britain Paul Slack,Ryk Ward,2002-03-07 This volume reviews the way in which over the centuries the evolving human presence in Britain has shaped the British landscape and how in turn the British landscape has moulded the development of British communities From the beginnings of human settlement Britain has represented a final frontier for successive waves of colonists each bringing its own set of cultural adaptations and its own ethos into the landscape Over time both landscape and culture have matured from raw frontier to settled centre moulded by the advent of agriculture towns and industry and by streams of migration both within Britain and from outside The chapters in this book by archaeologists historians and geographers present an interdisciplinary and accessible account of that long process Together they trace the various phases of the story showing how much of it has only recently been unearthed and how much remains to be discovered

From Tools to Symbols Francesco d'Errico,Lucinda Backwell,Bernard Malauzat,2005-06-01 A number of researchers have tried to characterise the anatomy and behavioural systems of early hominid and early modern human populations in an attempt to understand how we became what we are Can archaeology palaeo anthropology and genetics tell us how and when human cultures developed the traits that make our societies different from those of our closest living relatives In which cases are these differences substantial and when do they simply reflect our definitions of culture species the image we have of their evolution or of ourselves From Tools to Symbols a collection of twenty seven selected papers from a South African French conference organised in honour of the well known palaeo anthropologist Phillip Tobias provides a multidisciplinary overview of this field of study It is based on collaborative research conducted in sub Saharan Africa by South African French American and German scholars in the last twenty years and represents an excellent synthesis of the palaeontological and archaeological evidence of the last five million years of human evolution

Language and Reality Michael Devitt, Kim Sterelny, 1999 What is language How does it relate to the world How does it relate to the mind Should our view of

language influence our view of the world These are among the central issues covered in this spirited and unusually clear introduction to the philosophy of language Making no pretense of neutrality Michael Devitt and Kim Sterelny take a definite theoretical stance Central to that stance is naturalism that is they treat a philosophical theory of language as an empirical theory like any other and see people as nothing but complex parts of the physical world This leads them controversially to a deflationary view of the significance of the study of language they dismiss the idea that the philosophy of language should be preeminent in philosophy This highly successful textbook has been extensively rewritten for the second edition to reflect recent developments in the field
