A Man From Planet Earth Giancarlo Genta,2015-08-26 Sometime in the not too distant future unbeknownst to Earth the Galaxy is home to a number of spacefaring societies This confederation enforces a strict protocol forbidding any contact with civilizations that have not yet achieved both a substantial spacefaring capability and sufficient maturity to control the technology explosion before triggering their own extinction While this policy is intended to only bring in peaceful new members matters change entirely when the confederation is threatened by some unknown entity is the menace real or imagined The confederation decides to break with the rules and sends a delegate to Earth to hire one of the supposedly belligerent Earthlings to investigate and to revive the confederation s long unused starfleet The Earthman agrees but demands a high price should he succeed the confederation will have to accept Earth as a new member As the threat becomes ever more acute the question soon becomes which mission will prove harder saving the confederation or convincing it to accept the deal The extensive appendix written in non technical language reviews the scientific and technological topics underlying the plot ranging from the Fermi paradox space travel and artificial collective intelligence to theories on possible universal convergences in technological and biological development

How to Find a Habitable Planet James F. Kasting,2021-12-07 The amazing science behind the search for Earth like planets Ever since Carl Sagan first predicted that extraterrestrial civilizations must number in the millions the search for life on other planets has gripped our imagination Is Earth so rare that advanced life forms like us or even the simplest biological organisms are unique to the universe How to Find a Habitable Planet describes how scientists are testing Sagan s prediction and demonstrates why Earth may not be so rare after all James Kasting has worked closely with NASA in its mission to detect habitable worlds outside our solar system and in this book he introduces readers to the advanced methodologies being used in this extraordinary quest He addresses

the compelling questions that planetary scientists grapple with today What exactly makes a planet habitable What are the signatures of life astronomers should look for when they scan the heavens for habitable worlds In providing answers Kasting explains why Earth has remained habitable despite a substantial rise in solar luminosity over time and why our neighbors Venus and Mars haven't If other Earth sized planets endowed with enough water and carbon are out there he argues chances are good that some of those planets sustain life Kasting describes the efforts under way to find them and predicts that future discoveries will profoundly alter our view of the universe and our place in it This book is a must read for anyone who has ever dreamed of finding other planets like ours and perhaps even life like ours in the cosmos In a new afterword Kasting presents some recent breakthroughs in the search for exoplanets and discusses the challenges facing space programs in the near future
