[General Finance Interview Questions and Answers - English](#) Navneet Singh, Here are some common finance interview questions along with their sample answers

Technical Questions What is the difference between a balance sheet and an income statement Answer A balance sheet provides a snapshot of a company s financial position at a specific point in time showing assets liabilities and shareholders equity An income statement on the other hand shows the company s financial performance over a period detailing revenues expenses and profits or losses Can you explain the concept of working capital Answer Working capital is the difference between a company s current assets and current liabilities It is a measure of a company s short term liquidity and operational efficiency Positive working capital means the company can cover its short term liabilities with its short term assets What is EBITDA and why is it important Answer EBITDA stands for Earnings Before Interest Taxes Depreciation and Amortization It is a measure of a company s operating performance and is

used to evaluate its profitability without the impact of financing and accounting decisions It provides a clearer picture of the company's operational efficiency

**How do you value a company?** Answer There are several methods to value a company including the Discounted Cash Flow (DCF) analysis, comparable company analysis, and precedent transactions. DCF involves forecasting the company's free cash flows and discounting them to present value using the company's weighted average cost of capital (WACC). Comparable company analysis involves evaluating similar companies and applying relevant multiples to the target company.

**Behavioural Questions** Tell me about a time when you had to analyse complex financial data. Answer In my previous role, I was tasked with analysing quarterly financial statements to identify trends and variances. I used advanced Excel functions to aggregate the data and created pivot tables to simplify the analysis. This allowed me to present key findings to senior management, which helped in making informed strategic decisions.

**How do you prioritize tasks when you have multiple deadlines to meet?** Answer I prioritize tasks based on their urgency and impact, using a combination of task lists and scheduling. I break down larger projects into smaller, manageable tasks and set intermediate deadlines to ensure steady progress. Effective communication with my team and stakeholders also helps in managing expectations and ensuring timely completion of tasks.

**Describe a challenging financial project you worked on and how you handled it.** Answer One challenging project was implementing a new budgeting system for my department. I had to coordinate with various stakeholders to gather requirements, research suitable software, and oversee the transition from the old system. Through diligent project management, regular updates, and training sessions, I successfully led the project to completion on time and within budget.

**Conceptual Questions** What is the time value of money, and why is it important in finance? Answer The time value of money (TVM) is the concept that a sum of money is worth more now than the same sum in the future due to its earning potential. This principle is crucial in finance as it underpins many financial decisions and calculations, such as discounted cash flow analysis, loan amortization, and investment appraisals.

**Can you explain the difference between equity financing and debt financing?** Answer Equity financing involves raising capital by selling shares of the company, thereby diluting ownership but not incurring debt. Debt financing, on the other hand, involves borrowing money that must be repaid over time with interest. Each has its pros and cons: equity financing doesn't require repayment but dilutes ownership, while debt financing retains ownership but increases financial obligations.

**What are derivatives, and how are they used in finance?** Answer Derivatives are financial instruments whose value is derived from the value of underlying assets, such as stocks, bonds, commodities, or interest rates. They are used for various purposes, including hedging risks, speculating on price movements, and arbitraging price discrepancies between markets.
