Perspectives for Agronomy M.K. van Ittersum, S.C. van de Geijn, 1997-12-11 During the 4th ESA Congress held in the Netherlands 7-11 July 1996 a new perspective for agronomy emerged Various contributions demonstrate the need for a new role of agronomy and its tools In recent decades agriculture has evolved from an activity with mainly productivity aims into an issue conciliating environmental agricultural and economic and social objectives Placing agriculture in such a broadened perspective requires a different agronomy with new tools and approaches at a range of aggregation levels It calls for detailed knowledge concerning the functioning productivity and ecological relationships of agricultural plants and crops In addition it calls for a constant update and synthesis of existing and newly generated knowledge the design of new ideotypes and genotypes new production technologies cropping systems farming systems and agro ecological land use systems This proceedings book presents a set of case studies illustrating the various agronomic tools that can be used for specific agronomic questions The case studies are grouped in sections illustrating relevant subquestions in developing an agriculture with broadened objectives The book starts with an introductory paper on the role of agronomy in research and education in Europe The second section deals with agricultural land use food security and environment This is followed by a set of papers describing experimental research and modeling approaches used to design new ideotypes of crops including physiological properties in relation to growth factors such as radiation CO₂ temperature and water Sustained soil fertility directly links to nutrient cycling and soil organic matter A selected set of papers addresses the improvements in resource use efficiency and as such their contribution towards economic environmental and agricultural objectives The final section addresses the design of integrated and ecological arable farming systems It highlights the role of prototyping interaction with leading edge farmers as promising tools to design implement and test new farming systems It is hoped that the activities of the European Society for Agronomy and the Proceedings of its 4th Congress will stimulate to serve the new perspectives of agronomy i.e. to adopt ecological principles to optimally manage the use of resources and to meet social and economic objectives

Soils, Plant Growth and Crop Production - Volume II Willy H. Verheye, 2010-11-30 Soils Plant Growth and Crop Production is a component of Encyclopedia of Food and Agricultural Sciences Engineering and Technology Resources in the global Encyclopedia of Life Support Systems EOLSS which is an integrated compendium of twenty Encyclopedias Plants and crops in particular grow and develop through the uptake of water and nutrients by the root system in soils and their transformation

into biomass through processes governed by photosynthesis The quality and amount of products harvested from this biomass depend largely on the intrinsic properties of the soil i e the moisture and nutrients made available for uptake by the roots These volumes describe in a synthetic form the impact of the most important soil properties on general agronomy crop production cultivation methods and yields including the specific management aspects which take away some production constraints Changes in general agronomy as a result of plant breeding climatic change and competition between newly introduced crops are discussed The three volumes with contributions from distinguished experts in the field discusses about soils plant growth and crop production in several related topics These volumes are aimed at the following five major target audiences University and College students Educators Professional practitioners Research personnel and Policy analysts managers and decision makers and NGOs

Bhojwani,2012-12-02 During the past decade Plant Tissue Culture PTC has attracted considerable attention because of its vital role in plant biotechnology PTC offers novel approaches to plant production propagation and preservation Some in vitro techniques are being applied on a commercial scale while many others hold great potential Consequently the literature in this area has grown rapidly This book deals with recent developments in plant tissue culture and presents a critical assessment of the proven and potential applications of the various in vitro techniques it also highlights current problems

limiting the application of tissue culture and projects the future lines of research in this field Subsistence Agriculture and Economic Development Clifton R. Wharton, 2017-07-28 One of the more perplexing problems of economic development is helping subsistence farmers break away from production simply for home consumption to become commercial farmers producing more and more for sale in the marketplace Although subsistence farms occupy 40 percent of the world's cultivated land and support half of mankind facts about them and programs to increase their output are scattered Subsistence Agriculture and Economic Development provides a unique overview of these difficulties and their significance to economic development It is the first book to subject subsistence agriculture to rigorous multi disciplinary examination and to bring to light new theory and empirical evidence directed toward solving the problem This volume contains original chapters by forty leading social scientists and agricultural specialists who summarize contemporary theory fact and policy on the problems of developing agriculture from subsistence to a commercial basis Each contributor speaks from one or more of the relevant standpoints of economics sociology agronomy political science anthropology and social psychology There emerges a clear meaningful picture of the subsistence farmer and the problems involved in changing his attitudes methods of production and economic and social environment Broad in scope documented with pertinent case studies and far reaching in its guidelines for future research and policy this work should be read by all concerned with increasing food production and with economic development This is an area of special concern in the uses of food products as the basis for new energy resources an issue of increasing importance in the advancing use of ethanol as a fuel drawn from corn products **Enhancing Agriculture in Africa** United States. Implementing Sustainable Development Claudia María Vargas, Phillip J. Cooper, 2024-11-25 Despite all the talk of sustainability there has not been enough action to halt or reverse the impacts of climate change Decades after the Rio Earth Summit and despite the many policies and commitments to move toward sustainable development there continues to be a serious implementation gap Implementing Sustainable Development focuses on the challenges of turning international commitments and policy promises into local action Through global examples and cases the authors examine not only the core principles but also successful and failed efforts to address the social environmental and economic dimensions of sustainable development They systematically guide readers through the technical legal economic administrative political ethical and cultural feasibility of putting sustainable development solutions in place Based on broad research Claudia Mar a Vargas and Phillip J Cooper offer a practical and useful approach to identifying and addressing policy implementation challenges what works what doesn't and why Features of this thoroughly revised second edition include Dozens of case studies from the throughout the world An overview of the UN Sustainable Development Goals Action oriented solutions to the challenges of

sustainable development Careful consideration of local and indigenous knowledge Key issues of equity equality and the importance of community involvement **Reproductive Adaptation of Rice to Environmental Stress** Yoji Takeoka, 1992

In rice culture where seed production is the primary objective the process of spikelet formation is of major interest The number and development of spikelets which are differentiated by the panicle directly affect the grain yield Moreover the spikelet formation process especially the stage of differentiation and development of generative cells and the flower fertilization stage is the most sensitive to environmental stresses Subjection to environmental stress at this stage results in severe injuries with consequent reduction in the yield These stresses include temperature stress physiological stresses associated with soil high salinity flood drought and fungus infection The response of the plant differs according to the developmental stage at which it experiences the stress Thus an understanding of rice reproductive function and physiology is extremely important to make clear how the morphogenesis of rice spikelets and especially that of the reproductive organs takes place and indeed how it is altered under various stress conditions Here also the mode of adaptation of rice plants to environmental stress is discussed with the conclusion that the plant changes its propagation strategies from sexual reproduction to asexual through vegetative proliferation in order to preserve its descendents Only a very few studies have been undertaken on sexual organogenesis sex expression and mode of propagation Though the information in this book is restricted to the rice plant this knowledge can be applied to other crops and non crop plants It has been written not only for researchers and students in agronomy who are concerned with rice studies and production but also for those who are concerned with reproductive physiology and morphogenesis Many scanning electron microscope pictures and other figures are provided for the sake of clarity and as an aid to the understanding of the reader Agriculture, Rural Development, Food and Drug Administration, and Related Agencies Appropriations For 2006, Part 1A, 109-1 Hearings, *, 2005 **108-2**
