Fiber Optics Engineering Mohammad Azadeh,2009-08-05 Within the past few decades information technologies have been evolving at a tremendous rate causing profound changes to our world and our ways of life In particular fiber optics has been playing an increasingly crucial role within the telecommunication revolution Not only most long distance links are fiber based but optical fibers are increasingly approaching the individual end users providing wide bandwidth links to support all kinds of data intensive applications such as video voice and data services As an engineering discipline fiber optics is both

fascinating and challenging Fiber optics is an area that incorporates elements from a wide range of technologies including optics microelectronics quantum electronics semiconductors and networking As a result of rapid changes in almost all of these areas fiber optics is a fast evolving field Therefore the need for up to date texts that address this growing field from an interdisciplinary perspective persists This book presents an overview of fiber optics from a practical engineering perspective Therefore in addition to topics such as lasers detectors and optical fibers several topics related to electronic circuits that generate detect and process the optical signals are covered In other words this book attempts to present fiber optics not so much in terms of a field of optics but more from the perspective of an engineering field within optoelectronics

Dorothy Lau, 1992 *New Directions in Guided Wave and Coherent Optics* D.B. Ostrowsky, E. Spitz, 1971-01-31 As optical fiber communication systems have moved out of the laboratory and into commercial use over the past several years the general field of guided wave and coherent optics has undergone a radical transformation Research in optical communication has turned heavily towards single mode technology and totally new phenomena and applications of the existing technology outside the communication field have begun to proliferate It was for this reason that we decided to organize a NATO Advanced Study Institute assembling the leading workers in this new domain in order to define the state of the art and develop an idea of the new directions the field might take The lectures and seminars presented at this Advanced Study Institute form the basis for this book The subjects treated can be roughly grouped as New phenomena in optical fibers such as non linear effects soliton propagation and polarization conservation New applications of fibers to measurements of rotation pressure temperature etc and medical uses Advanced and exploratory work on single mode fiber communication systems including the use of coherent transmission schemes and optical amplification Recent developments of optical information treatment based on four wave mixing Integrated optical devices and technologies including bistable devices parametric oscillators and optical logic In addition to these major topics a number of national reviews and specialized seminars treating new guided wave structures and materials are included The co editors admit being rather pleased with the result
