HADAMARD MATRICES AND THEIR APPLICATIONS

By A. Hedayat and W. D. Wallis

University of Illinois at Chicago Circle and University of Newcastle

An $n \times n$ matrix H with all its entries $+1$ and -1 is *Hadamard* if $HH' = nI$. It is well known that n must be 1, 2 or a multiple of 4 for such a matrix to exist, but is not known whether Hadamard matrices exist for every n which is a multiple of 4. The smallest order for which a Hadamard matrix has not been constructed is (as of 1977) 268. Research in the area of Hadamard matrices and their applications has steadily and rapidly grown, especially during the last three decades. These matrices can be transformed to produce incomplete block designs, t-designs, Youden designs, orthogonal F-square designs, optimal saturated resolution III designs, optimal weighing designs, maximal sets of pairwise independent random variables with uniform measure, error correcting and detecting codes, Walsh functions, and other mathematical and statistical objects. In this paper we survey the existence of Hadamard matrices and many of their applications.

   Hadamard Matrices and Their Applications S. S. Agaian,2014-01-15   Hadamard Matrices and Their Applications K. J. Horadam,2007 In Hadamard Matrices and Their Applications K J Horadam provides the first unified account of cocyclic Hadamard matrices and their applications in signal and data processing This original work is based on the development of an algebraic link between Hadamard matrices and the cohomology of finite groups that was discovered fifteen years ago The book translates physical applications into terms a pure mathematician will appreciate and theoretical structures into ones an applied mathematician computer scientist or communications engineer can adapt and use The first half of the book explains the state of our knowledge of Hadamard matrices and two important generalizations matrices with group entries and multidimensional Hadamard arrays It focuses on their applications in engineering and computer science as signal transforms spreading sequences error correcting codes and cryptographic primitives The book s second half presents the new results in cocyclic Hadamard matrices and their applications Full expression of this theory has been realized only recently in the Five fold Constellation This identifies cocyclic generalized Hadamard matrices with particular stars in four other areas of mathematics and engineering group cohomology incidence structures combinatorics and signal correlation Pointing the way to possible new developments in a field ripe for further research this book formulates and discusses ninety open questions
