

PRELIMINARIES

PM-910 is a 9" (23cm) diagonal CRT used reliable picture monitor for speechroom video program. Full solid-state with top quality integrated circuits and silicon semiconductor design assure high quality picture for a long time. Simple circular design and compact construction present this monitor as an economical device. The PM-910T external sync drives picture monitor with DC restoration is optionally available for higher class applications.

This manual contains initial set up procedures, operating instructions and service information for both types, PM-910 and PM-910T.

Please note that the PM-910 picture monitor is finely adjusted precision piece of equipment. To be assured of trouble-free operation, full performance capability and a long service life, we strongly recommend that you check these instructions completely before attempting to assemble, install or operate the monitor.

Although this picture monitor is a solid-state, module unit using mainly low-voltage circuitry at non-hazardous energy levels, power supply voltages present on certain parts of the interior. Such parts are not accessible in normal use, but while carrying out replacements or repair, **EXTREME CARE** should be taken. Main voltage can be **LETHAL**.

It is strongly recommended not to move them unless really necessary, and in such cases, always follow the procedure given in these instructions, and use appropriate tools. And note that the inside adjustment or repair should only be made by a fully qualified technician.

CARE IN HANDLING

Careful handling of the monitor and accessories should be practiced at all times, avoiding unnecessary physical shocks and violent rough handling.

The monitor should always be set up in a well-ventilated area, and shielded from heat sources, high-powered lights, especially strong magnetic fields (such as power transformers), which may cause picture swing or distortion.

Excessively moisture-, gas- or salt-laden atmospheres should be avoided as much as possible, since circuitry components and connector contacts may be adversely affected.

Dust accumulation should be avoided, since many parts of the unit will be adversely affected in time, and the service-life will be shortened.

Regularly check the connection cables, which are prone to damage, especially in outdoor use. The cable should always be handled with care, kept free from sharp bends and kinks, and relieved from strain over the connectors. And checking of the connectors for full inspection and tightness is also recommended, especially where the same setup is used for a long time.

SET UP & OPERATION

Position the picture monitor to the desired location and connect the power cord to an AC outlet. And make sure that the monitor is installed securely, in a stable condition.

Make the coaxial-cable connection for video signal between the picture monitor and the signal source (video camera or VTR etc.). And make certain that all connectors are properly and fully mated, and the locking rings are securely tightened.

Set the video termination switch to 75-ohm (if more than one monitor is to be used, see below).

If provided, set the sync (internal/external switch to internal (if applicable)).

After switching on the monitor and setting up the raster, adjust the brightness and contrast controls for the most pleasing picture.
