approach to flood risk contextualizes current conclusions on the eventual effects of climate change by showing that human factors are of paramount importance in understanding the process of risk production. The book sets a state of art around the flood issue from the description of the phenomena to the management of risk, dikes, dams, reducing vulnerability, management of crisis. The chapters are written by specialists but are accessible to the mainstream scientist. Each chapter exposes knowledge, methodologies, scientific locks and the prospects of each discipline on the theme of floods.
