Linde Hydraulic Control (LHC)

Digital electro-hydraulic controller

Instead of a control lever, an electrical motor can operate the drive control technology, instead of a hydraulic actuator, a computer electronic controller instead with a very powerful microcontroller performs all control functions for the drive unit and the working hydraulics (2).

Adaptation to various trucks

The electronic control unit is capable of controlling trucks from a variety of series and with different drive systems. To use different truck parameters and sensors, each truck model has to be adapted, which is already included in the truck.

Troubleshooting

The processor of the electronic control unit analyzes analogue and digital signals. The processor recognizes digital malfunctions and system errors, and displays an error message on the display/monitor on the control interface. In addition, the control unit activates a variety of functions according to the error's highest priority.

- Working light flashes
- Activation indicator of the manual emergency stop
- The truck brakes with automatic emergency stop and all hydraulic valves
- The main battery (as the emergency function) the manual emergency stop activates off
- An error code appears on display

These functions can be activated by switching off the emergency stop and the error signal. During a fault, the control unit shows whether the error is still present. If the error is no longer present, the truck resumes normal operation. If the error persists, the error code appears on the display and one of the measures listed above is activated.

Changing the controller

4.1.1.1.1.1

Problems regarding component damage due to electrostatic discharge (ESD) damage to working elements will occur if the controller is moved.

The controller is equipped with a "Ground plug" which is attached to the truck's main wiring harness. Communication lines pass via this plug. The upper part of the controller and the lower part of the truck are connected via the main wiring harness.

4.1.1.1.1.2

If the controller is replaced, the personnel using the controller must be notified and they adapted to the cable harness. All necessary information is available on the cable harness.
