Problem:

Nathan pays \$68 for his favorite x-box game. Each month he has to pay \$3 to clean the game since he plays it so much. If he doesn't pay for cleaning Captain Crusader doesn't show up clearly on the screen and that is so annoying to him. Bryan pays \$83 for his favorite x-box game but only pays \$2 a month for cleaning since his mom works at the game store and gets a discount on cleanings. How many months will it take for Bryan to pay less than Nathan?

The Mathematics Playbook John Almarode, Kateri Thunder, Michelle Shin, Douglas Fisher, Nancy Frey, 2024-01-28 This is a playbook about teaching and learning mathematics. It is not just focused on the content skills, procedures, conceptual understandings, and application of mathematics, but the teaching and learning of mathematics in our schools and classrooms. From counting to conic sections, patterns to permutations, radii to rational equations and fractions to fractals, the questions we aim to answer include: 1. How do we foster, nurture, and sustain mathematics learning? 2. How do we approach the teaching and learning of mathematics to ensure all learners have equity of access and opportunity to the highest level of mathematics learning possible? 3. What are the non-negotiables in a high-quality mathematics task? 4. How do we know if learners really get it? These are the questions the authors strive to address in this playbook. Influences of information and communication technologies (ICT) on human information processing are widely assumed, and particularly effects of dis- and misinformation are a current threat to democracies. Today, higher education competes with a very diverse online media landscape and domain-specific content from sources of varying quality, ranging from high-quality videographed lectures by top-level university lecturers, popular scientific video talks, collaborative wikis, anonymous forum comments or blog posts to YouTube remixes of discipline factoids and unverified Twitter feeds. Self-organizing learners need more knowledge, skills, and awareness on how to critically evaluate quality and select trustworthy sources, how to process information, and what cognitive, affective, attitudinal, behavioral, and neurological effects it can have on them in the long term. The PLATO program takes on the ambitious goal of uniting strands of research from various disciplines to address these questions through fundamental analyses of human information processing when learning with the Internet. This innovative interdisciplinary approach includes elements of ICT innovations and risks, learning analytics, and large-scale computational modelling, aimed to provide us with a better understanding of how to effectively and autonomously acquire

Algebra Teaching around the World Frederick K.S. Leung,Kyungmee Park,Derek Holton,David Clarke,2014-10-13 Utilizing the LPS dataset Algebra Teaching around the World documents eighth grade algebra teaching across a variety of countries that differ geographically and culturally Different issues in algebra teaching are reported and different theories are used to characterize algebra lessons or to compare algebra teaching in different countries Many commonalities in algebra teaching around the world are identified but there are also striking and deep rooted differences The different ways algebra was taught in different countries point to how algebra teaching may be embedded in the culture and the general traditions of mathematics education of the countries concerned In particular a comparison is made between algebra lessons in the Confucian Heritage Culture CHC countries and Western countries It seems that a common emphasis of algebra teaching in CHC countries is the linkage or coherence of mathematics concepts both within an algebraic topic and between topics On the other hand contemporary algebra teaching in many Western school systems places increasing emphasis on the use of algebra in mathematical modeling in real world contexts and in the instructional use of metaphors where meaning construction is assisted by invoking contexts outside the domain of algebraic manipulation with the intention to helping students to form connections between algebra and other aspects of their experience Algebra Teaching around the World should be of value to researchers with a focus on algebra pedagogy or international comparisons of education Because of the pedagogical variations noted here there is a great deal of material that

will be of interest to both teachers and teacher educators
