

LOW IMPACT DEVELOPMENT

for Eco-Conscious Stormwater Management

GREEN ROOFS

A green roof is easily installed on any type of building, residential or commercial, and can be as simple as a single layer of groundcover or as intricate as an extensive vegetable garden. In addition to providing excellent stormwater management and improving water quality, green roofs provide such benefits as reduced energy use and air pollution, and improved comfort and quality of life.

RAIN GARDENS

By slowing stormwater as it travels downhill, rain gardens provide opportunity for stormwater to infiltrate, habitat for wildlife, and attractive landscaping, all while inhibiting erosion. Plants and soils are specifically chosen and engineered to clean stormwater by reducing nutrients and overall sediment loads.

RAIN BARRELS

A rain barrel collects and stores stormwater runoff from rooftops, where it can later be used to water lawns and gardens. To be effective, they must be emptied between storms and utilized by a high percentage of a community's population. BONUS: Rain barrels can also be decorative, like the painted barrels shown here:

TREE BOXES

Stormwater planters and tree boxes are installed in sidewalks and are designed to manage stormwater runoff from streets and sidewalks. Planters are typically sunken into the sidewalk, rectangular in shape with concrete sides, and lined with a permeable fabric. They are then filled with stone or gravel and topped with soil, hardy plants, and trees. Because they are built down into the sidewalk, runoff is directed into these planters that provide storage, infiltration, and evapotranspiration.

PERMEABLE PAVEMENT

The link between high levels of impervious surfaces such as roadways and parking lots and degraded water quality is indisputable, and reducing impervious surfaces is one of the key steps in improving any community's water quality. Permeable pavement is designed to allow water to pass through it into the ground below where it is naturally filtered. Pervious pavement has a myriad of benefits including not only reduced stormwater runoff and replenished groundwater, but also reduction of flooding, pollutants, temperature, roadway ice buildup, and traffic hydroplaning accidents.

DISCONNECTED IMPERVIOUS SURFACES (DIS)

DIS is a low-cost, effective way of reducing the volume and flow of stormwater runoff by directing it from impervious areas to graded and vegetated pervious surfaces. DIS is effective for both roofs and paved areas and provides both infiltration and filtration.

STORMWATER BUMPOUT

A stormwater bump-out is a curb-extension that is typically located either mid-block or at an intersection. Composed of a layer of stone that is topped with flood and nutrient tolerant plants and soil, these attractive bumpouts filter stormwater while providing an aesthetic benefit to communities. The bumpout is constructed with a curb-cut that directs stormwater runoff into the bumpout where it can be infiltrated and filtered.

GRASSED SWALES

A grassed swale is an open channel designed to manage a specific water quality volume, often along road-sides and parking lots. Stormwater runoff is slowed by vegetation as it flows in these channels, allowing the stormwater to infiltrate and be filtered by the underlying soil. Grassed swales are long and shallow in shape and have plants that are both flood and erosion resistant.

Low Impact Development and Sustainable Stormwater Management Thomas H. Cahill, 2012-06-13 Sustainable Stormwater Management introduces engineers and designers to ideas and methods for managing stormwater in a more ecologically sustainable fashion. It provides detailed information on the design process, engineering details and calculations and construction concerns. Concepts are illustrated with real world examples complete with photographs. This guide integrates the perspectives of landscape architects, planners and scientists for a multi disciplinary approach. This is an enlightening reference for professionals working in stormwater management from engineers and designers to developers to regulators and a great text for college courses.

Low Impact Development Michael L. Clar, 2009 This collection contains 32 selected papers that address a broad range of topics connected to sustainable stormwater management using the Low Impact Development LID technology.

[Generating Low Impact Development Network](#) Siyang Wen, 2015 design guidelines offers the opportunities for figuring out how LID networks can be applied to the Tumblin Creek Watershed and revealing issues that would be encountered in creating the LID network. The project concluded that the vegetated open spaces including parks, greenways and self organizing conservation areas, right of ways and parking lots of the Tumblin Creek watershed could form a connected LID network. Designers and developers can learn from the strategies discussed in this project to create sustainable urban environment with LID networks in the future.

Landscape Architecture and Water Scarcity Zoraida Anne Etter, 2011

Low impact development an integrated design approach, 2017 This thesis investigates sustainable storm water management in an alpine case study in the eastern part of Innsbruck. Firstly the focus lies on the ecological properties of concepts such as Low Impact Development LID, Water Sensitive Urban Design WSUD, Sustainable Drainage System SuDS and Blue Green Infrastructure BGI especially with regard to the site conditions in the study area. Through a literature research no specific impediments which would hinder a potential implementation could be detected. However there are still general obstacles that discourage a more intensive utilization. In the practical part the Urban Biophysical Environments Technologies Simulator UrbanBEATS a dedicated software for the planning of sustainable storm water management is used to detect suitable types and locations for the elements of sustainable storm water management in the study area. In a further step the

Storm Water Management Model SWMM of the United States Environmental Protection Agency USEPA is applied in order to assess the hydrological performance in quantitative terms The performance during five different storm events are recorded and show a peak runoff reduction up to 4 26% in the total system a peak flooding reduction up to 20 28% and a flooding volume reduction up to 17 49% Sustainable Stormwater Management Technologies Amie Therrien,2009-08 There is much discussion regarding the effects of urban development on stormwater management especially the negative effects such as flooding stream erosion and increased pollution An emerging sustainable stormwater management philosophy is Low Impact Development LID which seeks to reverse these negative effects by designing infrastructure to mimic natural hydrologic processes such as infiltration This paper considers several lot level stormwater management controls encouraged by LID using the Environmental Protection Agency s modeling program SWMM 5 0 The results show that for a typical residential lot in Toronto Ontario LID technologies can have a significant positive impact For example peak runoff from a 1 inch unit storm was reduced by 57% with the construction of a green roof or when paved areas are replaced with porous paving Rethinking Stormwater Management through Sustainable Urban Design Ali Cheshmehzangi,Maycon Sedrez,Andrew Flynn,2024-08-31 This book provides a different narrative and approach to rethinking stormwater management through sustainable urban design It delves into design interventions and innovative strategies that lead to solving context specific issues of flooding water scarcity etc Starting with an overarching introduction and discussion on stormwater management research the book then primarily focuses on sustainable urban design practices strategies and policy guidelines By summarising a selection of successful global case study examples the book highlights how we should rethink stormwater management practices and policies from the design perspective Through sustainable urban design suggestions the book covers a wide range of conceptual examples to design and policy guidelines as well as best practices that could be utilised for other contexts The book is divided into two sections of 1 architectural and urban design practices and interventions and 2 policies and action plans This collection helps researchers and scholars rethink stormwater management and consider innovative and more importantly sustainable design strategies that could help develop new paradigms and policies for water related issues in cities and communities This will interest multiple stakeholders mainly urban policymakers planners urban designers urban specialists landscape architects architects and urban ecologists It could be treated as a case study based guide for governmental units dealing with water related issues in cities and urban areas
