FUNDAMENTALS OF ROBOT VISION Dr. Jagadeesh Kumar, 2024-12-18 Vision is the ability to see and recognize objects by collecting the light reflected of these objects into an image and processing that image Robot vision makes use of computers or other electronic hardware to analyze visual images and recognize objects of importance in the current application of the robots Digital image is an array of pixels that has been digitized into the memory of a computer A binary number is stored in each pixel to represent the intensity and possibly the wavelength of the light falling on the part of the image Robot vision is the system including different methods for processing analyzing and understanding the visuals interpreted by a robot All these methods produce information that is translated into decisions for robots From start to capture images and to the final decision of the robot a wide range of technologies and algorithms are used like a committee of filtering and decisions A Robot vision system has to make the distinction between objects and in almost all cases has to tracking these objects Applied in the real world for Robot applications these vision systems are designed to duplicate the capabilities of the human vision system using programming code and electronic parts As human eyes can detect and track many objects in the same time Robot vision systems seem to pass the difficulty in detecting and tracking many objects at the same time A Robot system finds its place in many fields from industry and Robot services Even is used for identification or navigation these systems are under continuing advances with new features like 3D support filtering or detection of light intensity applied to an object Applications and benefits for Robot vision systems used in industry or for service robots includes

Industrial robots and cobots Michał Gurgul, 2018-12-08 In the modern world highly repetitive and tiresome tasks are being delegated to machines The demand for industrial robots is growing not only because of the need to improve production efficiency and the quality of the end products but also due to rising employment costs and a shortage of skilled professionals The industrial robot market is projected to grow by 16% year on year in the immediate future The industry s progressing automation is increasing the demand for specialists who can operate robots If you would like to join this sought after and well paid professional group it s time to learn how to operate and program robots using modern methods This book provides all the information you will need to enter the industry without spending money on training or looking for someone willing to introduce you to the world of robotics You will learn about all aspects of programming and implementing robots in a company The book consists of four parts general introduction to robotics for non technical people part two describes industry robotisation part three depicts the principles and methods of programming robots the final part touches upon the safety of industrial robots and cobots Are you a student of a technical faculty or even a manager of a plant who would like to robotise production If you are interested in this subject you won t find a better book
