Just Transitions and the Future of Law and Regulation Alexandra R. Harrington, 2022-06-18 This book provides a comprehensive assessment of how national and international efforts to achieve carbon neutrality have been embraced as necessary to meet the requirements of the Paris Agreement as well as the needs of the planet The authors explore the increasing tensions between aspirations and entrenched practices as methods to implement carbon neutrality are devised particularly at the national and sub national levels This is perhaps best typified by efforts to shift from dirty energy production such as coal to greener alternatives which are often supported in laws and rules but opposed by society To bridge this void the concept of just transitions has increasingly come to the forefront of international and national focus yet is often poorly understood This book examines the ways in which just transitions have been proposed as a legal and regulatory bridge to address issues that result in societal resistance to implementation It uses past and existing practice studies of just transitions before providing an analysis of how just transitions can be used to not only to assist in the shift to carbon neutrality but also in new shifts such as those caused by the Covid 19 pandemic impacts on economy environment and society and to address future global challenges

Future Trends in Microelectronics Serge Luryi, Jimmy Xu, Alexander Zaslavsky, 2010-08-03 In the summer of 2009 leading professionals from industry government and academia gathered for a free spirited debate on the future trends of microelectronics This volume represents the summary of their valuable contributions Providing a cohesive exploration and holistic vision of semiconductor microelectronics this text answers such questions as What is the future beyond shrinking silicon devices and the field effect transistor principle Are there green pastures beyond the traditional semiconductor

technologies This resource also identifies the direction the field is taking enabling microelectronics professionals and students to conduct research in an informed profitable and forward looking fashion The Future of Just Transitions Darren McCauley, Tracy-Lynn Field, Raphael Heffron, Iain Todd, 2024-09-06 This book explores the theory and history behind just transitions highlighting the social and political influences that have shaped the concept and investigating the challenges it poses Bridging theory with practice it assesses critical transitions and advocates for inclusive approaches that manage employment impacts and engage communities in the move towards renewable energy Energy Transitions and the Future of Gas in the EU Gökçe Mete, 2019-11-23 This book assesses the impact of energy transitions on the future of natural gas in the EU energy mix As we approach 2050 the requirement to sharply decrease CO2 and other GHG emissions means that the role of gas infrastructure in the EU and beyond will change drastically But what does such change mean To address this question the author critically analyses the EU's evolving natural gas market policy and law Clearly structured throughout the book explores the following questions How can we maximise the potential of gas infrastructure to reduce carbon emissions What are the lessons learned from decision making experience in the natural gas sector Is the EU moving towards or away from a climate neutral gas sector How will green and low carbon gas technologies be supported And are proposals to drive a growing share of hydrogen biomethane and synthetic methane to the system just an excuse to prolong fossil fuel operations The book explores whether the EU will continue to subsidise natural gas projects or decarbonise the gas grid before 2050 and at what cost Recommendations are proposed for a new regulatory and policy framework for development and operation of hydrogen pipelines injection of biomethane into the existing gas grid and for pipelines carrying CO2 Filling an important gap in the literature this book aims to develop an understanding of and clarify the complex range of legislation involved within a single analytical framework Although the focus is mainly on the future of gas in the EU the findings and recommendations are relevant for a much wider geography This book will be an invaluable reference to policy makers and practitioners as well as researchers and students across the social sciences interested in the future of energy Energy Transitions and the Future of the African Energy Sector Victoria R. Nalule, 2020-10-12 This book explores current developments in the African energy sector and highlights how these are likely to be affected by the ongoing global efforts to transition to a low carbon economy It analyses the legal regulatory and policy frameworks at the national and regional level as they relate to Energy transition in Africa and discusses how regionalism is increasingly utilized to tackle energy access and climate change challenges Using case studies from across the continent several key thematic issues including gender justice social license to operate local content and conflict of energy laws are covered in detail The authors also uniquely examine the progressive nature of global energy use and introduce the new concept of Energy Progression This book will be an invaluable reference for researchers and policymakers looking for a comprehensive overview of the field **Future Transitions in the Mining Industry** Tuija Mononen, Lasse Peltonen, 2025-10-09 This volume focuses on mining and the challenges for this industry as it

transitions and evolves as the demand for products and responsible and sustainable mining ever increases Mining is a prerequisite for modern society yet the industry is often criticized for having many negative environmental and social impacts The volume explores the challenges controversies and responses that arise when a society is reliant on the products of mining to maintain their standard of living yet are simultaneously calling for the implementation of sustainable practices with many communities also being resistant to mining activities taking place in their own location Many transitions which present a solution to one problem can often lead to new issues and developments elsewhere For example the electrification of vehicles will help to mitigate climate change but this will simultaneously increase the demand for minerals required for batteries The acceptance of or resistance to mining varies from location to location and across different scales with key factors relating to the social and environmental impacts and the economic benefits One common tension revolves around whether local communities really benefit economically from mining activities and even if they do they could now be negatively impacted by the digitization of the industry which will naturally lead to a reduction in the number of jobs This volume explains how transitions of these types are inextricably linked by demand acceptance and the perception of benefits and that as the industry evolves more tensions and controversies will develop This book will be of great interest to scholars and students of mining and the extractive industries transitions and sustainable development as well as to professionals working in natural resource management

Clean Energy Transitions: The Future of Power Generation Ahmed Musa, 2025-01-13 Clean Energy Transitions explores the rapid shift from fossil fuels to renewable energy sources in the global power generation sector This book examines the technological economic and political challenges and opportunities involved in transitioning to a cleaner more sustainable energy system It looks at renewable energy sources such as solar wind geothermal and hydropower and how they are transforming the global energy landscape The book also explores the role of innovation and policy in accelerating the clean energy transition offering solutions to overcome obstacles such as infrastructure storage and energy access Clean Energy Transitions provides a forward thinking analysis of the future of energy offering readers a glimpse into a world powered by clean renewable sources and a sustainable low carbon economy

Lighting California's Future ,2012 India's Technology-led Development: Managing Transitions To A Digital Future Vipin Gupta, Samir Chatterjee, Alka Maurya, 2023-05-24 The recent disruptions caused by the COVID 19 pandemic have shaken the fundamental foundations of global business to their core creating unprecedented challenges for management scholars and practitioners In addition over the past few decades the general adoption of communication technologies and the evolving trends towards digitalization and Industry 4 0 have revolutionized the way organizations are managed and led Business model innovation and the developing importance of sustainability have also emerged as strategic platforms for all types of organizations Technology led managerial transformation has now become critical for 21st century business This book investigates four approaches in understanding the perspectives for integrating technology with holistic development a
