Multivariable Calculus with Linear Algebra and Series presents a modern but not extreme treatment of linear algebra the calculus of several variables and series Topics covered range from vectors and vector spaces to linear matrices and analytic geometry as well as differential calculus of real valued functions Theorems and definitions are included most of which are followed by worked out illustrative examples Comprised of seven chapters this book begins with an introduction to linear equations and matrices including determinants The next chapter deals with vector spaces and linear transformations along with eigenvalues and eigenvectors The discussion then turns to vector analysis and analytic geometry in $\mathbb{R}^3$ curves and

surfaces the differential calculus of real valued functions of n variables and vector valued functions as ordered m tuples of real valued functions Integration line surface and multiple integrals is also considered together with Green's and Stokes's theorems and the divergence theorem The final chapter is devoted to infinite sequences infinite series and power series in one variable This monograph is intended for students majoring in science engineering or mathematics
