Linear And Nonlinear Waves In Nonthermal Dusty Plasmas:

Linear And Nonlinear Waves In Nonthermal Dusty Plasmas Nila Rani Kundu, 2013 Recently the analysis of nature and characteristic of the nonlinear electrostatic waves of dusty plasmas has grown a deep attention to the Researches of Computational Plasma Science In this book a rigorous theoretical investigation has been made on linear and nonlinear propagation of dust ion acoustic DIA waves in a dusty plasma with nonthermal distribution of plasma particles The linear dispersion relation of the DIA waves which exist in such an unmagnetized dusty plasma system has been discussed both analytically and graphically in this book Then the work has been generalized to a magnetized dusty electronegative plasma in order to study obliquely propagating DIA solitary waves and their multi dimensional instabilities The combined effects of the external magnetic field and nonthermal distribution of negative electron which are found to significantly modify the basic properties of small but finite amplitude DIA solitary waves are rigorously examined in this book The basic features viz amplitude width stability etc and the underlying physics of the DIA solitary waves which are relevant to space and laboratory dusty plasmas are also briefly discussed in this book *Dusty Plasmas in the New Millennium* R. K. Shukla,2002 Dust is ubiquitous in the universe and responsible for stellar and planetary formation Virtually all previous studies have considered the dust particulates to be a charge neutral component Satellite missions such as Voyager revealed the extent to which charged dust plays a role in astrophysics In most areas dust exists in the presence of a dilute plasma In such a plasma environment the dust becomes charged to a variety of processes eg photo ionisation collisions with electrons and ions thermionic emission etc Closer to home in the Earth's mesosphere rocket measurements and radar observations conclusively demonstrate the importance of charged dust in forming complex structures responsible for Polar Mesospheric Summer

Echoes This book is the outcome of a periodic collaboration between a small group of scientists meeting twice a year at the International Space Science Institute ISSI in Bern Switzerland over a period of three years The book begins with a description of the fundamental physical processes which characterise dusty plasmas Starting with charging and shielding of isolated dust particles in a plasma environment the review progresses to non linear dust dynamics of spherical and irregular dust In an ensemble of a dust plasma system collective processes begin to manifest themselves in the form of new wave modes and instabilities which play an important role in the collective behaviour displayed in space and astrophysical environment Finally more exotic topics such as the Ising model for irregular dust grain alignment classical Casimir forces and chargeons are explored
