Manual of Forensic Taphonomy James T. Pokines, Ericka N. L'Abbe, Steven A. Symes, 2021-12-30 The main goals in any forensic skeletal analysis are to answer who is the person represented individualization how that person died trauma pathology and when that person died the postmortem interval or PMI The analyses necessary to generate the biological profile include the determination of human nonhuman or nonosseous origin the minimum number of individuals represented age at death sex stature ancestry perimortem trauma antemortem trauma osseous pathology odontology and taphonomic effects the postmortem modifications to a set of remains The *Manual of Forensic Taphonomy* Second Edition covers the fundamental principles of these postmortem changes encountered during case analysis Taphonomic processes can be highly destructive and subtract information from bones regarding their utility in

determining other aspects of the biological profile but they also can add information regarding the entire postmortem history of the remains and the relative timing of those effects The taphonomic analyses outlined provide guidance on how to separate natural agencies from human caused trauma These analyses are also performed in conjunction with the field processing of recovery scenes and the interpretation of the site formation and their postdepositional history The individual chapters categorize these alterations to skeletal remains illustrate and explain their significance and demonstrate differential diagnosis among them Such observations may then be combined into higher order patterns to aid forensic investigators in determining what happened to those remains in the interval from death to analysis including the environments in which the remains were deposited including buried terrestrial surface marine freshwater or cultural contexts Features Provides nearly 300 full color illustrations of both common and rare taphonomic effects to bones derived from actual forensic cases Presents new research including experimentation on recovery rates during surface search timing of marine alterations trophy skulls taphonomic laboratory and field methods laws regarding the relative timing of taphonomic effects reptile taphonomy human decomposition and microscopic alterations by invertebrates to bones Explains and illustrates common taphonomic effects and clarifies standard terminology for uniformity and usage within in the field While the book is primarily focused upon large vertebrate and specifically human skeletal remains it effectively synthesizes data from human ethological geological paleontological paleoanthropological archaeological artifactual and zooarchaeological studies Since these taphonomic processes affect other vertebrates in similar manners The Manual of Forensic Taphonomy Second Edition will be invaluable to a broad set of forensic and investigative disciplines
