Kinetics of Catalytic Reactions--Solutions Manual M. Albert Vannice, 2008-03-27 This manual of solutions to the problems in Kinetics of Catalytic Reactions has been prepared to assist those who use this book in a teaching function However these solutions should also benefit those outside the classroom who want to apply the principles and concepts that are discussed in the book By studying and observing the approaches used in solving these problems it is very likely that similar applications can be envisioned in different kinetic problems that the investigator might face Thus the availability of these solutions is a good learning tool for everyone Additional details and insight about the solutions provided can be obtained by reading the cited references I have tried to eliminate all errors both conceptual and typographical in these solutions however the probability is high that I have not succeeded completely Should any errors of commission or omission be found I would greatly appreciate being informed I can be reached at this email address mavche engr psu edu or mail can be sent to me at 107 Fenske Laboratory Department of Chemical Engineering The Pennsylvania State University University Park PA 16802 Albert Vannice v Contents Preface v Solutions to Problems Chapter 3 Catalyst Characterization *Student Solutions Manual for Physical Chemistry* C. Boudart,2012-12-06 NMR methods have for a considerable time been standard processes for the analysis of molecular structure so much so that they are now universally regarded as indispensable for this purpose Nevertheless with the passage of time NMR methodology has been elaborated to levels of ever increasing complexity and analytical sophistication so that the non specialist may now be readily excused for the belief that for anything beyond relatively elementary methods one would be well advised to work in collaboration with the specialist experts The application of NMR methods to the field of catalysis occurred in the main relatively late in the day mainly because those catalysts of greatest industrial importance that is heterogeneous catalysts are solids and so require special NMR methods if usefully narrow NMR lines are to be observable Even so magic angle spinning NMR methodology is now thoroughly well established and is finding increasing use in the study of catalyst structure Of course conventional NMR methods have been used for a considerable time for the analysis of the products of catalytic reactions Chapter 1 of the present volume by Professor Jacques Fraissard and his collaborators is designed to give an account of the application of NMR methods to the field of catalysis but not including the conventional use of NMR for reaction product analysis since this is already well covered in the existing NMR literature Technical Abstract Bulletin Defense Documentation Center (U.S.),1964 Research Grants Index National Institutes of Health (U.S.).
