**Endocrine Pathophysiology** Andrea Manni,Akuffo Quarde,2020-07-22 This practical guide presents a concise approach to exploring endocrine pathophysiology through the physical exam emphasizing common clinical signs in endocrinology that can be elicited through inspection palpation percussion or auscultation The established and proposed mechanisms underlying these physical signs are highlighted allowing students residents and trainees to better appreciate endocrine pathophysiology at the bedside The text is organized sensibly to facilitate quick and efficient review by medical trainees Major diseases in endocrinology are grouped by organ systems pituitary thyroid adrenal and so on Specific physical examination findings in each primary endocrine disease are reviewed and grouped under the categories of clinical features and pathophysiology followed by related clinical and pathophysiology pearls A brief description of the clinical finding is followed by a summary of the pathophysiologic mechanisms underlying the stated clinical finding Relevant normal physiology and pathophysiology are reviewed where applicable to facilitate learning There are numerous texts on the pathophysiologic basis of diagnostic and laboratory findings in endocrinology There is however no dedicated text to address questions that might be asked by trainees Endocrine Pathophysiology satisfies this need in the literature

**Hydrogels** Thakur Raghu Raj Singh,Garry Laverty,Ryan Donnelly,2018-02-28 Hydrogels are crosslinked macromolecular polymeric materials arranged in a three dimensional network which can absorb and retain large amounts of water Hydrogels are commonly used in clinical practice and experimental medicine for a wide range of applications including drug delivery tissue engineering and regenerative medicine diagnostics cellular immobilization separation of biomolecules or cells and barrier materials to regulate biological adhesions This book elucidates the underlying concepts and emerging applications of hydrogels and will provide key case studies and critical analysis of the existing research

*Transcriptional Regulation in Cancers and Metabolic Diseases* Wen Zhou,Carol Prives,2015-12-04 The transcription factor TF mediated regulation of gene expression is a process fundamental to all biological and physiological processes Genetic changes and epigenetic

modifications of TFs affect target gene expression during the formation of malignant cells Extensive work has been done on the critical TFs in various disease models Despite the success of numerous TF targeted therapies there remain significant hurdles understanding the mechanisms transcriptional targets and networks of physiologic pathways that govern TF action This effort is now beginning to produce exciting new avenues of research A clinically relevant topic for genetic change of TF is the mutant isoforms of p53 the most famous tumor suppressor The p53 mutations either results in loss of function or acting as dominant negative for wild type protein or gain of function specifically promoting cancer survival The gain of function is achieved by shifting p53 binding partner proteins or changed genomic binding landscape leading to a cancer promoting transcriptome Another example of genetic change of TF causing malignancy is the AML ETO fusion protein in the human t 8 21 leukemia The fusion protein is an active TF and more interestingly new studies link the disease causing role of AML ETO to the unique transcriptome in the hematopoietic stem cells Nuclear receptors NR are a group of ligand dependent TFs governing the expression of genes involved in a broad range of reproductive developmental and metabolic programs Genetic changes and epigenetic modifications of NRs lead to cancers and metabolic diseases Androgen receptor AR estrogen receptor ER and progesterone receptor PR are well studied NRs in prostate breast and endometrial cancers The development in sequencing technology and computational genomics enable us to investigate the transcription programs of these master TFs in an unprecedented level This Research Topic aims to present the most up to date progress in the field of transcription regulation in cancers and metabolic diseases
