International Trade Fairs and Inter-Firm

Knowledge Flows Rachael Gibson, 2023-01-02 Against a backdrop of economic uncertainty caused by a shift toward protectionism and the COVID 19 pandemic among other issues this book suggests that international trade fairs ITFs represent a vital source of economic dynamism that can support national and regional economies by creating opportunities for firms to access new markets network with key actors in their industry or value chain and tap into valuable external knowledge flows regarding new technologies and innovations Author Rachael Gibson argues that ITFs have become crucial nodes in the global political economy driving global economic dynamics and mediating differences between capitalist economies regarding their technological and institutional practices and conditions In this way ITFs represent a decisive mechanism by which distinct national patterns of technological specialization may converge or diverge Trade fairs represent important platforms for networking interactive learning and knowledge exchange because they foster intense interactions among actors despite spatial boundaries ITFs also tend to be organized according to a specific technological or industry focus which means that they can facilitate interactions between firms from different capitalist varieties Through the diffusion of state of the art knowledge ITFs may thus serve as drivers of economic globalization challenging the continuation of distinct capitalist varieties by enabling cross system convergence regarding the technological specializations of firms Yet it is clear that countries have retained competitive advantages in specific industries and that full convergence has not taken place This book explores this puzzle *Agriculture, Rural Development, and Related Agencies Appropriations* United States.
