Kak, 2017-07-27 Object Oriented scripting with Perl

and Python Scripting languages are becoming increasingly important for software development. These higher level languages with their built in easy to use data structures are convenient for programmers to use as glue languages for assembling multi language applications and for quick prototyping of software architectures. Scripting languages are also used extensively in Web based applications. Based on the same overall philosophy that made Programming with Objects such a wide success Scripting with Objects takes a novel dual language approach to learning advanced scripting with Perl and Python the dominant languages of the genre. This method of comparing basic syntax and writing application level scripts is designed to give readers a more comprehensive and expansive perspective on the subject. Beginning with an overview of the importance of scripting languages and how they differ from mainstream systems programming languages the book explores Regular expressions for string processing The notion of a class in Perl and Python Inheritance and polymorphism in Perl and Python Handling exceptions Abstract classes and methods in Perl and Python Weak references for memory management Scripting for graphical user interfaces Multithreaded scripting Scripting for network programming Interacting with databases Processing XML with Perl and Python. This book serves as an excellent textbook for a one semester undergraduate course on advanced scripting in which the students have some prior experience using Perl and Python or for a two semester course for students who will be experiencing scripting for the first time. Scripting with Objects is also an ideal resource for industry professionals who are making the transition from Perl to Python or vice versa.

The Photographic Image in Digital Culture Martin Lister, 2013-09-23 This new edition of The Photographic Image in Digital Culture explores the condition of photography after some 20 years of remediation and transformation by digital technology. Through ten especially commissioned essays by some of the leading scholars in the field of contemporary photography studies a range of key topics are discussed including the meaning of software in the production of photograph the nature of networked photographs the screen as the site of photographic display the simulation of photography in the videogame photography ubiquitous computing and technologies of ambient intelligence developments in vernacular photography and social media the photograph and the digital archive the curation and exhibition of the networked photograph the dominance of the image bank in commercial and advertising photography the complexities of citizen photojournalism. A recurring theme addressed throughout is the nature of photography after photography and the paradoxical nature of the medium in the 21st century a time when the traditional technology of photography has become defunct while there is more photography than ever. This is an ideal book for students studying photography and digital media.
