Fundamentals of the Theory of Computation: Principles and Practice Raymond Greenlaw, H. James Hoover, 1998-07-14 This innovative textbook presents the key foundational concepts for a one-semester undergraduate course in the theory of computation. It offers the most accessible and motivational course material available for undergraduate computer theory classes. Directed at undergraduates who may have difficulty understanding the relevance of the course to their future careers, the text helps make them more comfortable with the techniques required for the deeper study of computer science. The text motivates students by clarifying complex theory with many examples, exercises, and detailed proofs. This book is shorter and more accessible than the books now being used in core computer theory courses. Theory of computing is a standard required course in all computer science departments.

Compressed Image File Formats John Miano, 1999 Since not all graphic formats are of equal complexity, author John Miano does not simply choose a number of file formats and devote a chapter to each one. Instead, he offers additional coverage for the more complex image file formats like PNG, a new standard, and JPEG while providing all information necessary to use the simpler file formats. While including the well-documented BMP, XBM, and GIF formats for completeness along with some of their less-covered features, this book gives the most space to the more intricate PNG and JPEG, from basic concepts to creating and reading actual files. Among its highlights, this book covers JPEG Huffman coding, including decoding sequential mode JPEG images and creating sequential JPEG files, Optimizing the DCT Portable Network Graphics format, PNG, including decompressing PNG image data and creating PNG files, Windows BMP, XBM, and GIF.
