How International Law Works in Times of Crisis George Ulrich, Ineta Ziemele, 2019-09-19 For some time the word crisis has been dominating international political discourse But this is nothing new Crisis has always been part of the discipline of international law History indeed shows that international law has developed through reacting to previous experiences of crisis reflecting an agreement on what it takes to avoid their repetition However human society evolves and challenges existing rules structures and agreements International law is confronted with questions as to the suitability of the existing legal framework for new stages of development Ulrich and Ziemele here bring together an expert group of scholars to

address the question of how international law confronts crises today in terms of legal thought rule making and rule application The editors have characterized international law and crisis discourse as one of a dialectical nature and have grouped the articles contained in the volume under four main themes security immunities sustainable development and philosophical perspectives Each theme pertains to an area of international law which at the present moment in time is subject to notable challenges and confrontations from developments in human society The surprising general conclusion which emerges is that by and large the international legal system contains concepts principles rules mechanisms and formats for addressing the various developments that may prima facie seem to challenge these very same elements of the system

Untangling with Value Stream Mapping Ovidiu Contrás, 2022-04-05 The standard belief in books about Lean initiatives and value stream mapping VSM is that VSM works well on transactional processes which are primarily linear processes where handoffs are well defined and the outcome is known and it is useful for repetitive projects or products This book counters these statements by clearly demonstrating how a VSM exercise can be successfully performed in complex multifunctional environments involving nonrepetitive work such as aircraft new product development custom engineering software development and project management The methodology described in this book is the result of more than ten years of refinement and is based on practice while working with multidisciplinary teams and helping them achieve their goals This is a novel approach to capturing the information flow in a VSM by recognizing it as the place where most of the issues are generated especially for the previously mentioned environments and the fact that classical mapping methodologies including classical VSM do not capture it well The VSM methodology that the author developed goes to the essence of a VSM activities flow information flow timeline uses conventional VSM icons and some custom information flow icons and helps the following Quantifying waste VSM literature gap Making disconnects visible VSM literature gap Making behavioral and cultural patterns visible VSM literature gap If the steps are followed thoroughly then lead time reductions ranging from 60% to 88% are achieved along with increased availability of resources more output with the same resources projects delivered on time and most importantly colleagues embracing the Lean mindset which greatly contributes to maintaining the gains Essentially this book helps readers perform a VSM in environments where multiple stakeholders interact with each other to deliver a product or a

service with unclear aspects such as what the product service is how all involved can contribute to the product or service transformation and how the interactions between them occur For example the products services targeted in this book include test results analysis results a custom design a process a methodology an engineering change integrated enterprise software and engineering drawings Concurrently this book helps readers map behavioral patterns such as micromanagement and company culture aspects such as excessive governance and decisions by committee *How to Deal with Climate Change?*

Beatrice Mosello,2015-03-03 As the evidence for human induced climate change becomes more obvious so too does the realisation that it will harshly impact on the natural environment as well as on socio economic systems Addressing the unpredictability of multiple sources of global change makes the capacity of governance systems to deal with uncertainty and surprise essential However how all these complex processes act in concert and under which conditions they lead to the sustainable governance of environmental resources are questions that have remained relatively unanswered This book aims at addressing this fundamental gap using as case examples the basins of the Po River in Northern Italy and the Syr Darya River in Kyrgyzstan The opening chapter addresses the challenges of governing water in times of climate and other changes Chapter Two reviews water governance through history and science The third chapter outlines a conceptual framework for studying institutional adaptive capacity The next two chapters offer detailed case studies of the Po and Syr Darya rivers followed by a chapter length analysis and comparison of adaptive water resources management in the two regions The discussion includes a description of resistant reactive and proactive institutions and puts forward ideas on how water governance regimes can transition from resistant to proactive The final chapter takes a high level view of lessons learned and how to transform these into policy recommendations and offers a perspective on embracing uncertainty and meeting future challenges **How to Use Microsoft Office XP** Sherry Kinkoph,Jennifer Fulton,2001
