Deblurring Images Per Christian Hansen, James G. Nagy, Dianne P. O'Leary, 2006-01-01 The book's focus on imaging problems is very unique among the competing books on inverse and ill posed problems It gives a nice introduction into the MATLAB world of images and deblurring problems Martin Hanke Professor Institut für Mathematik Johannes Gutenberg Universität When we use a camera we want the recorded image to be a faithful representation of the scene that we see but every image is more or less blurry In image deblurring the goal is to recover the original sharp image by using a mathematical model of the blurring process The key issue is that some information on the lost details is indeed present in the blurred image but this hidden information can be recovered only if we know the details of the blurring process Deblurring Images Matrices Spectra and Filtering describes the deblurring algorithms and techniques collectively known as spectral filtering methods in which the singular value decomposition or a similar decomposition with spectral properties is used to introduce the necessary regularization or filtering in the reconstructed image The concise MATLAB implementations described in the book provide a template of techniques that can be used to restore blurred images from many applications This book's treatment of image deblurring is unique in two ways it

includes algorithmic and implementation details and by keeping the formulations in terms of matrices vectors and matrix computations it makes the material accessible to a wide range of readers Students and researchers in engineering will gain an understanding of the linear algebra behind filtering methods while readers in applied mathematics numerical analysis and computational science will be exposed to modern techniques to solve realistic large scale problems in image processing With a focus on practical and efficient algorithms Deblurring Images Matrices Spectra and Filtering includes many examples sample image data and MATLAB codes that allow readers to experiment with the algorithms It also incorporates introductory material such as how to manipulate images within the MATLAB environment making it a stand alone text Pointers to the literature are given for techniques not covered in the book Audience This book is intended for beginners in the field of image restoration and regularization Readers should be familiar with basic concepts of linear algebra and matrix computations including the singular value decomposition and orthogonal transformations A background in signal processing and a familiarity with regularization methods or with ill posed problems are not needed For readers who already have this knowledge this book gives a new and practical perspective on the use of regularization methods to solve real problems Preface How to Get the Software List of Symbols Chapter 1 The Image Deblurring Problem Chapter 2 Manipulating Images in MATLAB Chapter 3 The Blurring Function Chapter 4 Structured Matrix Computations Chapter 5 SVD and Spectral Analysis Chapter 6 Regularization by Spectral Filtering Chapter 7 Color Images Smoothing Norms and Other Topics Appendix MATLAB Functions Bibliography Index

Digital Compositing for Film and Video Steve Wright, 2001-12-05 Digital Compositing for Film and Video is a hands on practical how to guide that addresses the problems and difficult choices faced by the professional compositor in real life situations It presents techniques tricks and solutions for dealing with badly shot elements coloration artifacts and mismatched lighting that bedevil actual compositors working on real shots Readers are offered in depth practical methods for matte extraction despill procedures compositing operations and color correction the meat and potatoes of all digital effects Compositing is the artistic blending of several disparate elements from a variety of sources into a single image while making all the component elements appear to be in the same light space and shot with the same camera When confronted with a bad composite any observer will recognize that something is wrong the artist will know what is causing the problem and the technician will know how to fix it A good compositor must be both an artist and a technician Written by a senior compositor with over ten years experience in both feature film and broadcast television this book offers a broad range of alternative solutions that will save hours of fiddling with composites trying to get them to look right when the basic tools aren't working A companion CD ROM provides examples of the many topics covered in this book
