Human Body Composition Gilbert B. Forbes, 2012-12-06 Man has always been curious about himself a curiosity that began centuries ago with an examination of the soul and that extended in the period of the Renaissance to his anatomy and certain functions such as the circulation of the blood Chemical science entered the scene in the 18th century and burst into prominence in the 19th century As the various chemical elements were discovered many were found to be present in body fluids and tissues Organic compounds were recognized it became known that body heat was produced by the combustion of food chemical transformations such as the production of fat from carbohydrate were recognized and in the 1850s it was determined that young animals differed from adults in certain aspects

of body composition As methods for chemical analysis evolved they were applied to samples of body fluids and tissues and it became apparent that life depended on chemical normality and most importantly it was realized that given the necessary amount of food and water the body had the ability to maintain a degree of constancy of what Claude Bernard called the milieu interieur in other words its interior chemical environment

Comprehensive Handbook of Cognitive Therapy Hal Arkowitz, L.E. Beutler, Karen M. Simon, 2013-06-29 In reviewing the Contents of this Handbook edited by Freeman Simon Beutler and Arkowitz I am both impressed and gratified with the enormous strides made by cognitive behavior therapy since the late 1960s A perusal of the Contents reveals that it is used with adults children couples and families it is clinically appropriate for such problems as anxiety depression sexual dysfunctions and addictions and it is employed in conjunction with psychopharmacological and other psychotherapeutic interventions It was in the mid 1960s when Breger and McGaugh published an article in the Psychological Bulletin taking behavior therapists to task for using only classical and operant principles in devising their therapeutic interventions Breger and McGaugh argued that the field of learning was undergoing a major revolution paying considerably more attention to cognitive processes than had previously been the case In short they criticized the growing behavioral orientation for being limited in its exclusively peripheralistic orientation At the time behavior therapists were initially somewhat resistant to any allusion to cognitive metaphors Indeed my own initial reactions to the Breger and

McGaugh article was quite negative Yet in rereading their critique many of their suggestions now seem most appealing No doubt I and my behavior colleagues lacked the appropriate cognitive set for incorporating such contradictory information Nonetheless the clinical evidence for the relevance of cognitive factors in the behavior change process was simply too compelling to ignore
