Lau, 2007-09-10 This book describes the technologies involved in all aspects of a large networking system and how the various devices can interact and communicate with each other Using a bottom up approach the authors demonstrate how it is feasible for instance for a cellular device user to communicate via the all purpose TCP/IP protocols with a wireless notebook computer user traversing all the way through a base station in a cellular wireless network e.g. GSM CDMA a public switched network PSTN the Internet an intranet a local area network LAN and a wireless LAN access point The information bits in travelling through this long path are processed by numerous disparate communication technologies The authors also describe the technologies involved in infrastructure less wireless

networks **Critical Information Infrastructures** Maitland Hyslop, 2007-09-05 Resilience is an increasingly important concept and quality in today's world. It is particularly important in the area of Critical Infrastructures. It is crucial in the area of Critical Information Infrastructure. This is because since the year 2000 man has been dependent on information and telecommunications systems for survival, particularly in the Organization for Economic Cooperation and Development (OECD) countries, and because all other Critical Infrastructures depend upon to a greater or lesser extent Critical Information Infrastructure. Until probably the late 1980s it would be fair to say that the defense of individual nation states depended upon a mixture of political will and armed might. The fall of the Berlin Wall may have effectively ended the Cold War and with it a bipolar world, but it brought globalization and a multipolar digital world in its wake. Simply put, a number of power vacuums were created and these have yet to be fully filled and settled. In this New World, many changes were afoot. These changes include the increasing irrelevance of nation states in federated structures and the export of democracy on the back of globalization. One of the biggest changes though is the use of digital technology by the OECD countries. This is on such a scale that these countries have become both dependent upon information technology and as individual states largely irrelevant to the new global electronic economy. This adaptation of Maslow's hierarchy of needs is attributed to KPMG.

Key features: Presents and analyses the key technological drivers of 4G, including WLANs, WiMAX convergence and IMS. Examines the rationale for IP for 4G by bringing together technologies, global developments and economic arguments in one single volume. Describes and puts in context the developments in the IEEE 802.21 Media Independent Handover group, in particular the options for network terminal controlled handover and the likely mechanisms for seamless handover, including application adaptation. Written for readability as well as depth, with access to detailed descriptions of technologies but also quick overviews. Contains scenario descriptions to motivate the need for seamless handover and benefits for the user: single sign-on, access to networks, single billing.
