Antonino Pennisi, Alessandra Falzone, 2019-09-25 This edited volume focuses on the hypothesis that performativity is not a property confined to certain specific human skills or to certain specific acts of language nor an accidental enrichment due to creative intelligence Instead the executive and motor component of cognitive behavior should be considered an intrinsic part of the physiological functioning of the mind and as endowed with self generative power Performativity in this theoretical context can be defined as a constituent component of cognitive processes The material action allowing us to interact with reality is both the means by which the subject knows the surrounding world and one through which he experiments with the possibilities of his body This proposal is rooted in models now widely accepted in the philosophy of mind and language in fact it focuses on a space of awareness that is not in the individual or outside it but is determined by the species specific ways in which the body acts on the world This theoretical hypothesis will be pursued through the latest interdisciplinary methodology typical of cognitive science that coincide with the five sections in which the book is organized Embodied enactivist
