Karbhari, Farhad Ansari, 2009-08-25 Structural health monitoring is an extremely important methodology in evaluating the health of a structure by assessing the level of deterioration and remaining service life of civil infrastructure systems This book reviews key developments in research technologies and applications in this area of civil engineering It discusses ways of obtaining and analysing data sensor technologies and methods of sensing changes in structural performance characteristics It also discusses data transmission and the application of both individual technologies and entire systems to bridges and buildings With its distinguished editors and international team of contributors Structural health monitoring of civil infrastructure systems is a valuable reference for students in civil and structural engineering programs as well as those studying sensors data analysis and transmission at universities It will also be an important source for practicing civil engineers and designers engineers and researchers developing sensors network systems and methods of data transmission and analysis policy makers inspectors and those responsible for the safety and service life of civil infrastructure Reviews key developments in research technologies and applications Discusses systems used to obtain and analyse data and sensor technologies Assesses methods of sensing changes in structural performance **Plant Microtechniques and Protocols** Edward Chee Tak Yeung, Claudio Stasolla, Michael John Sumner, Bing Quan Huang, 2015-09-19 A proper understanding of the structural organization of the plant body is essential to any study in plant biology Experimental studies in vivo and in situ will lead to structural physiological and cellular changes of the experimental material To study macroscopic and microscopic changes different histological methods and microtechniques can be used as they provide valuable information of the experimental system In addition the observed structural changes allow investigators to set hypothesis for further studies based on one's own observation Thus proper selection and utilization of microtechniques are a must for the success of a research program At present an up to date collection of protocols are not readily available in the literature The latest work in plant microtechniques was published in 1999 by Ruzin but many others are no longer in print e.g Jensen 1964 O'Brien and McCully 1981 Furthermore a majority of published works focus on techniques related to general processing and staining procedures A comprehensive treatment that encompasses broader applications of microtechniques to other disciplines is lacking e.g archeology wood science etc There is a need to create a comprehensive volume of botanical methods and protocols which includes traditional and novel techniques that can be used by researchers in plant science and investigators in other disciplines that require plant microtechniques in their research and teaching This book covers a wide variety of applications and brings them up to date to make them understandable and relevant especially to students using the methods
