Furthermore since these countries possess no reserves of fossil fuels and since their per capita consumption of primary energy is exceptionally high they also consider unmerchantable forest biomass a realistic source of indigenous energy A joint Nordic research project on harvesting and utilization of logging residue was carried out in 1969 1976 under the auspices of the Nordic Research Council on Forest Operations This fruitful cooperation soon gave rise to related national projects in Sweden Finland Norway and Denmark stimulating further research and producing practical applications Concurrently particularly after the worldwide energy crisis in 1973 research on all aspects of utilization of forest biomass mushroomed in the United States Canada and the Soviet Union An explosive increase occurred in both the number and diversity of biomass studies
