Paul* Jinfang Zhu,Joshua D. Milner,2019-06-19 Dr William E Paul 1936 2015 was the leader of the National Institutes of Health NIH immunology

community and his career is without parallel in the field of immunology. He was the Chief of the Laboratory of Immunology, National Institute of Allergy and Infectious Diseases (NIAID) from 1970 at the age of 34 until his death. His groundbreaking contributions to the field of immunology, including the discovery of interleukin IL-4, led to more than 600 publications over half a century. He also played an important role in the establishment of the NIH Vaccine Research Center while he was the Director of the NIH Office of AIDS Research. Furthermore, Dr. Paul was a shining icon and an international giant of contemporary immunology. He was a genius and a living encyclopedia of immunology, the author of the textbook *Fundamental Immunology* since its inception to the 7th edition in 2013 and the editor of the *Annual Review of Immunology* from its inaugural issue in 1983 until 2011. In his last book *Immunity*, he discussed the three laws of immunology: universality, tolerance, and appropriateness. These capture the essence of Dr. Paul as well as the field. Dr. Paul had an enormous impact on the research career of his trainees, many of whom became leaders in the field of immunology, including Drs. Charles Janeway, Ronald Schwartz, Laurie Glimcher, and Mark Davis. Dr. Paul was an intelligent, generous, humble, but optimistic man. He was also an inspirational and thoughtful leader, colleague, and friend; he inspired and encouraged people around him in every possible way. As his trainees and/or colleagues, we miss him greatly and dedicate this special Research Topic to his memory. We thank all the authors who participated in this collection, as well as other colleagues and friends of Dr. Paul's who have supported us in a series of events after Dr. Paul's passing. Finally, we would like to thank the *Frontiers in Immunology* for providing such a wonderful platform for remembering Dr. Paul's remarkable life.

Humanized Mice for HIV Research Larisa Y. Poluektova, J. Victor Garcia, Yoshio Koyanagi, Markus G. Manz, Andrew M. Tager, 2015-02-18

Over the last several years, the field of humanized mice has matured and developed into an essential component of translational research for HIV/AIDS. Humanized mice serve both as vehicles for discovery and as highly sophisticated platforms for biomedical research. In addition, humanized mice have demonstrated outstanding potential for the investigation of critical aspects of the infection and pathogenesis of the hepatitis and herpes viruses, as well as highly relevant microbial infections such as tuberculosis and malaria. *Humanized Mice for HIV Research* provides a comprehensive presentation of the history, evolution, applications, and current state of the art of this unique animal model. An expansion of twelve review articles that were published in *Humanized Mice* by Springer in 2008, Eds. Nomura, T. Watanabe, T. Habu, S. this book expertly captures the outstanding progress that has been made in the development, improvement, implementation, and validation of humanized mouse models. The first two parts of this book cover the basics of human-to-mouse xenotransplantation biology and provide critical information about human immune cell development and function based on individual models created from different immunodeficient strains of mice. The third and fourth parts investigate HIV-1 biology, including different routes of transmission, prevention, treatment, pathogenesis, and the development of adaptive immunity in humanized mice. The fifth part shows the broad applicability of humanized mice for therapeutic development, from long-acting antiretroviral combinations to genetic manipulations with

human cells and cell based approaches The sixth part includes liver tissue engineering and the expansion of humanized mice for many other human cell tropic pathogens
